

Jersey Retail Sales Q1 2012

Statistics Unit: www.gov.je/statistics

Summary

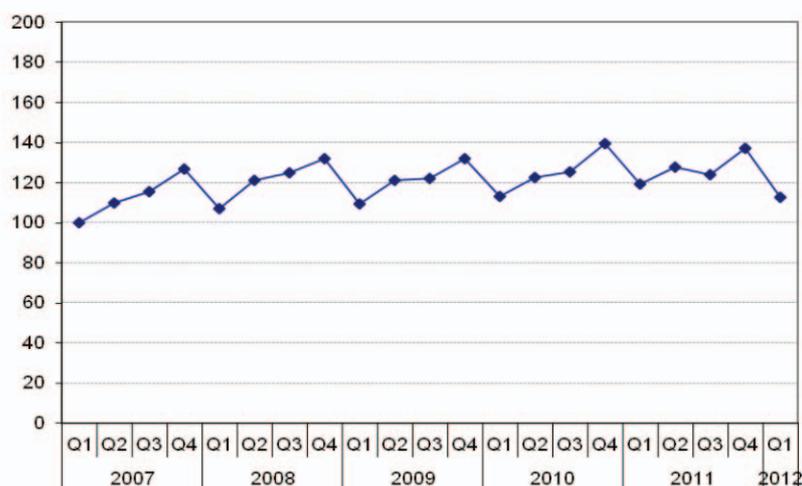

- the **seasonally adjusted total volume** of retail sales in Jersey in Q1 2012 was **9% lower** than in the corresponding quarter of 2011;
- this represents the third consecutive quarter in which the total volume of retail sales has declined on an annual basis;
- the predominantly **food** and **non-food** sectors have each recorded three consecutive quarters of a decline in the volume of retail sales on an annual basis;
- on a quarterly basis, the **food and non-food** sectors have recorded, respectively, three and four consecutive quarters of a fall in the volume of retail sales.

All retailers

Value of retail sales, all retailers

Figure 1 shows the total value of retail sales for the period from 2007 to Q1 2012. The clear seasonality is apparent, with retail turnover tending to be largest in the fourth quarter of each calendar year.

Figure 1 – Total value (Q1 2007 = 100); non-seasonally adjusted

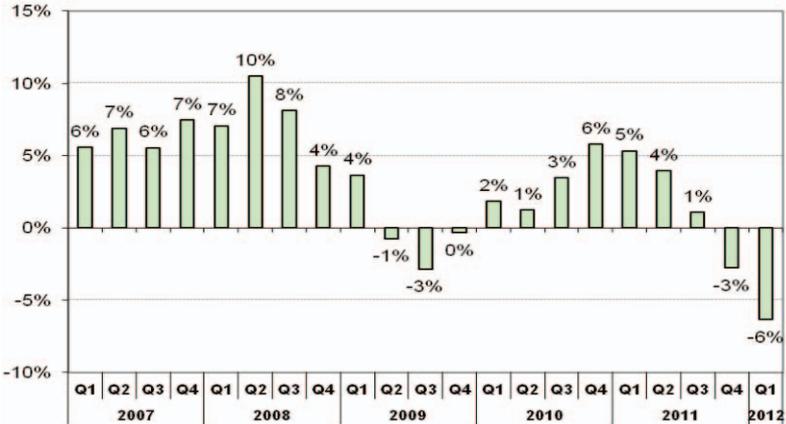

Comparing the same quarter in a given year with that of a year earlier (Figure 2) shows that each quarter from the start of 2010 to Q3 2011 had seen an increase in the total value of retail sales on an annual basis¹.

In contrast, the latest two quarters (Q4 2011 and Q1 2012) recorded decreases in total value on an annual basis of 3% and 6%, respectively.

¹ The increase in the rate of the Good and Services Tax (GST) from 3% to 5% in June 2011 was a contributing factor to the annual changes in value recorded in each of the four quarters from Q3 2011 to Q2 2012.

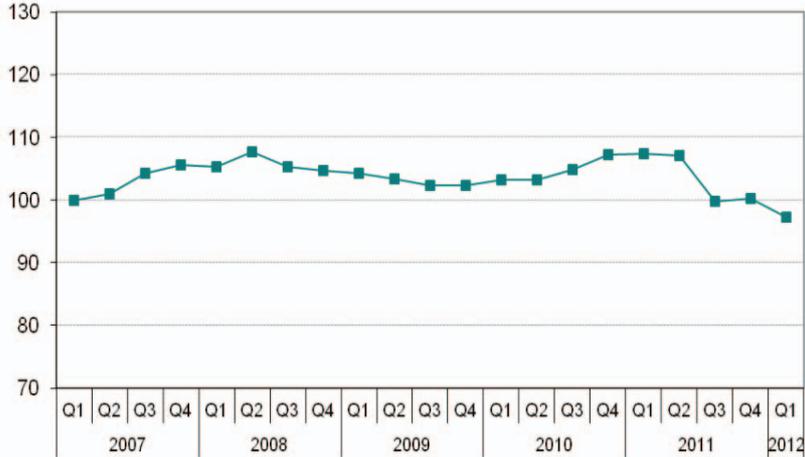

Figure 2 – Total Value: annual percentage change ²; *seasonally adjusted*

Volume of retail sales, all retailers

The volume index series³ is derived from the value series by use of deflators⁴ which remove the effect of price changes. The seasonally adjusted total volume index, from which seasonal and calendar effects are also removed, is shown in Figure 3a.

Figure 3a – Total Volume; (Q1 2007 = 100); *seasonally adjusted*

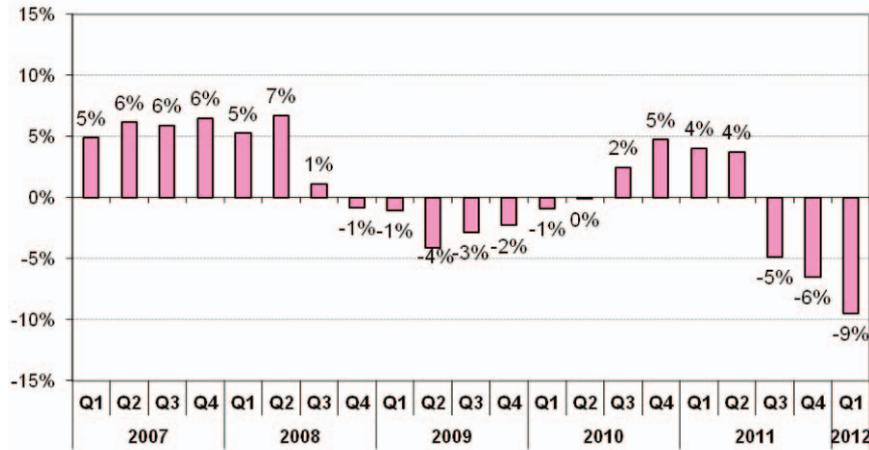

As is apparent from Figure 3a, the seasonally adjusted total volume of retail sales in Jersey had experienced an ongoing decline throughout the eighteen month period from mid-2008 to the end of 2009, before seeing some growth in 2010.

The first six months of 2011 were substantially flat in terms of the total volume of retail sales but were followed by a significant decline between Q2 and Q3 2011 (down by 7% on a quarterly basis).

The latest three quarters have recorded falls in total volume on an annual basis (Figure 3b), the most recent quarter, Q1 2012, seeing a decline of 9% compared with Q1 2011.

² Annual percentage changes shown as labels in figures are rounded to the nearest integer.
³ A volume index is an average of the proportionate changes in the quantities of a specified set of goods between two periods of time.
⁴ The deflators used are a weighted combination of the relevant section level indices of the Retail Prices Index (RPI). Following the recent methodological changes incorporated in the Retail Sales publication produced by the UK Office for National Statistics, the price deflators applied are harmonic means of the corresponding RPI section indices.

Figure 3b – Total Volume: annual percentage change; *seasonally adjusted*

Sector summaries

The “Predominantly food” sector is comprised of supermarkets, convenience stores and other small food stores. The “Predominantly non-food” sector is comprised of three sub-categories: Household goods; Textiles, clothing and footwear; and Non-food specialised stores. The survey returns within each sub-category are analysed separately and then aggregated to produce value and volume estimates for each sector.

Value of retail sales (seasonally adjusted)

The value of retail sales in predominantly **food** stores increased on an annual basis throughout the five-year period from 2007 to 2011. In contrast, the latest quarter, Q1 2012 was essentially unchanged compared with Q1 2011 (see Figure 4a).

Figure 4 – Value of retail sales in predominantly food and non-food stores; annual percentage change; *seasonally adjusted*

Figure 4a - Predominantly food: Annual % change in Value (s.a.)

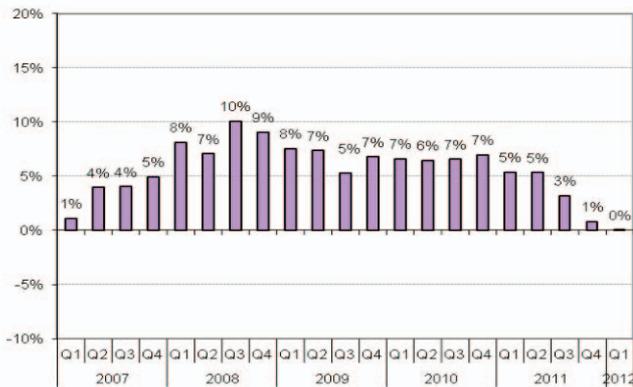

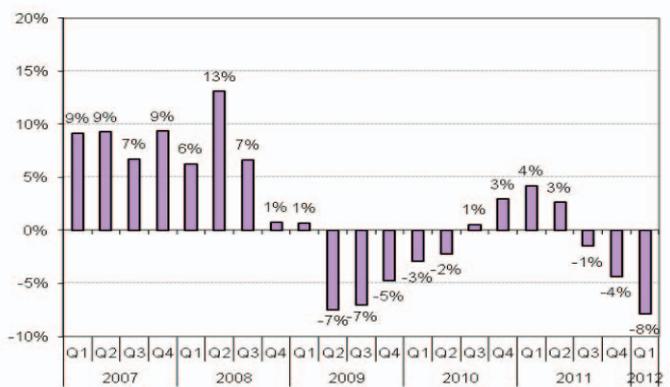

Figure 4b - Predominantly non-food: Annual % change in Value (s.a.)

s.a. = seasonally adjusted

Predominantly **non-food** stores saw some growth in the total value of retail sales on an annual basis during the latter part of 2010 and the first half of 2011 (see Figure 4b). In contrast, the latest three quarters have recorded progressively greater declines in total value on an annual basis.

Volume of retail sales (seasonally adjusted)

After a period of almost three years of increases, the total volume of retail sales in predominantly **food** stores has declined on an annual basis in each of the latest three quarters, with Q1 2012 showing the largest decline (down by 7%) compared to the corresponding quarter of 2011 (see Figures 5a and 6a and Appendix Table A1).

Figure 5 – Volume indices of retail sales in predominantly food and non-food stores; seasonally adjusted

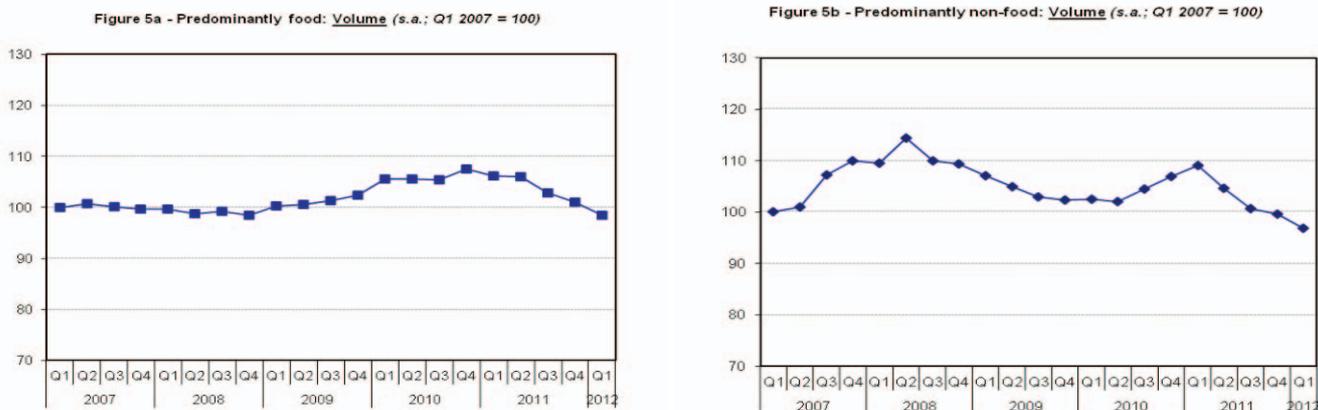

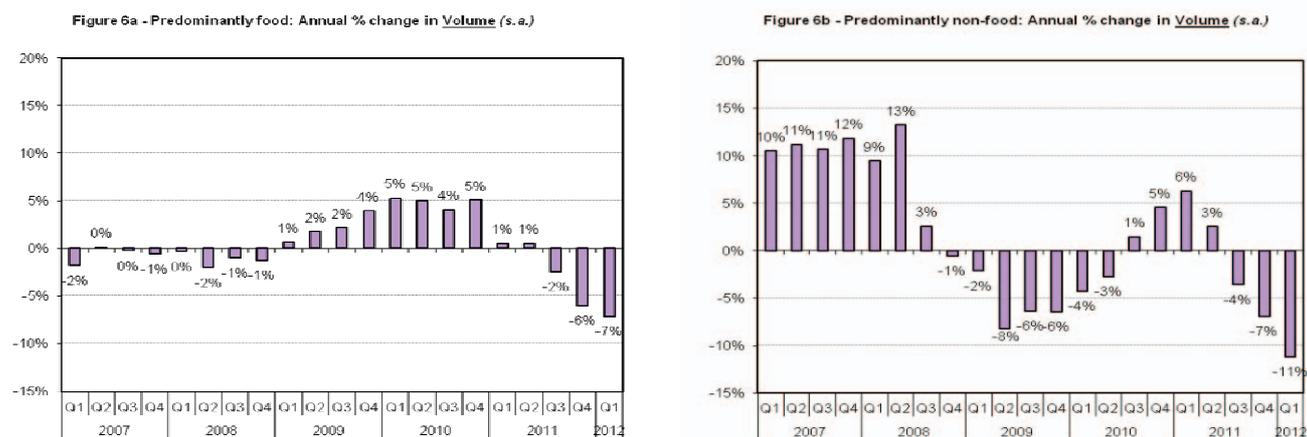

Figure 6 – Volume of retail sales in predominantly food and non-food stores; annual percentage change; seasonally adjusted

s.a. = seasonally adjusted

For predominantly **non-food** stores, the two-year period from mid-2008 to mid-2010 saw the volume of retail sales decline by about 11% in total, with almost every quarter recording a decrease on the previous quarter (Figure 5b). Such stores then saw some growth on both a quarterly and an annual basis during the latter part of 2010 and early 2011.

The three latest quarters have seen the volume of retail sales in predominantly non-food stores decline on an annual basis, the total volume in Q1 2012 being 11% lower than in Q1 2011 (see Figure 6b).

On a quarterly basis, predominantly **food** stores have recorded three consecutive quarters of a decline in the volume of retail sales whilst predominantly **non-food** stores have recorded four consecutive quarters of declining volume.

(r) revised: some estimates for Q4 2011 shown in Table A1 have been revised compared to the previous publication due to the provision of more recent manpower data.

Notes

1. Overview: Sampled businesses for Jersey Retail Sales Survey report total **retail turnover** on a quarterly basis. The main results of the survey are **total value** and **total volume** estimates in **seasonally adjusted** form:

- **value** estimates reflect the total turnover that businesses have recorded in a given quarter.
- **volume** estimates adjust the value estimates to remove the effect of price changes.

2. Retail: "Retail" is defined as the sales of goods to the general public for personal or household consumption, excluding motor trades.

3. Sample: A representative sample of retail businesses are sampled each quarter, stratified by size. The sample is reviewed twice yearly so that new or expanding businesses can be introduced; in this way, the sample remains representative of the retail trade sub-sector in Jersey.

4. Response rate: the response of businesses to the survey in Q1 2012 was 80% and represented coverage, in terms of employment, of half (50%) of Jersey's retail sub-sector.

5. Turnover: is defined as the net value of sales for all outlets under the business name within Jersey. Turnover includes all discounted, credit and deferred payments allowed to customers but not allowances for goods taken in part-exchange.

Total turnover includes:

- Turnover from services (e.g. repairs) as well as those from sales
- All charges for credit given as well as cash prices of credit sales
- Retail sales from outlets to all customers off-Island
- Retail sales via the internet
- Sales of mobile phones but excluding rental and mobile phone cards
- Sales against gift tokens, when token is redeemed not the face value of tokens sold
- Sales against money-off promotion coupons.

Total turnover excludes:

- Sales or commission on lottery tickets
- Receipts from credit card sales not made in the specified quarter
- Any health exemption receipts
- Sales of motor vehicles, parts, accessories and petrol
- Sales from catering facilities to customers
- Sales from other businesses trading on premises and any commission received on such sales
- Any non retail activity (e.g. manufacturing).

6. Classification:

a) Predominantly Food – Supermarkets, convenience stores and other stores which sell mainly food, beverages or tobacco;

b) Household goods – furniture, electrical appliances, DIY, gardening tools, floor covering, lighting equipment, haberdashery, crockery

c) Textile, Clothing and Footwear – clothes, shoes, accessories

d) Non-Food Specialised goods – e.g. sports goods, jewellery, craft goods, photographic, music, books, newspapers, office supplies, children's toys, second-hand goods, chemists, health goods, flowers, seeds, fertilizer, pets, medical goods, audio visual/home computing equipment, mobile phones, optical and precision equipment.

7. Methodology:

- Retail turnover for each sub-sector is calculated from the respondent businesses. A ratio estimator approach is applied to estimate the total retail turnover separately for each sub-sector, using the appropriate full-time equivalent (FTE) employment data compiled by the Jersey Manpower Survey;
- Volume data for each sub-sector are derived from value data using price deflators which are base-weighted harmonic means of the corresponding section level indices of the Retail Prices Index;
- Seasonal adjustment is conducted using the Eurostat Demetra software package.
- The revision of seasonally adjusted series is based on that of the UK Office of National Statistics revision policy for the Retail Sales Index.
