

ACTIVITY  
8

## Pond Pollution Tank

Create your own Pond Tank and learn the impact of different pollutants

### What you need:

#### Pond Tank

Clear plastic container

Plastic toy fish

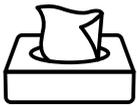

Floatable object -  
Eg. Styrofoam ball or a cork

String

#### Pollutants

Tissue paper

Straw

Chocolate Wrapper

Grass clippings or leaves

Cooking oil

Soil or gravel

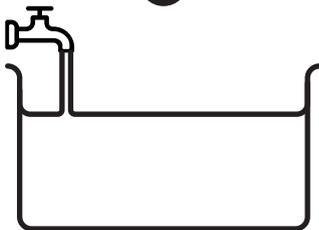

Paint

Coffee

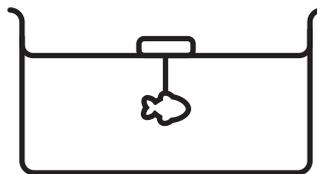

### What to do:

1

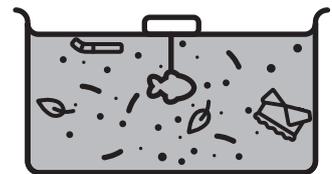

Fill the clear plastic container  $\frac{3}{4}$  full of water.

2

Using some string, attach the plastic toy fish to the floatable object and place in the container. The fish should be suspended in the middle of the water.

3

Drop the different types of 'pollutants', one by one, into the water.

### What do you think:

1

Is the fish easy to see with pollution in the water?

2

Do you think the pollution will harm the fish?

3

Would you swim in the water?
