

Have you seen this

DID YOU KNOW? In Jersey all surface water drains on roads are designed to remove rainwater and lead directly to the nearest stream, reservoir or the sea.

THIS AFFECTS YOU! Disposal of waste, such as paint, oils, sediment and litter into surface water drains can lead to the loss of clean drinking water. It can also cause damage to wildlife and their habitats.

GET INVOLVED! Eco-Active have launched the Blue Fish Campaign and we want you to take part. Contact Environmental Protection or Eco-Active
