

# Jersey Retail Sales Q2 2010

Statistics Unit: [www.gov.je/statistics](http://www.gov.je/statistics)

## Summary

- The seasonally adjusted **volume** of retail sales in Q2 2010 was almost the same as a year previously
- the decrease in volume of 0.2% represents the smallest annual fall for almost 2 years;
- The volume of retail sales in predominantly **food stores** in Q2 2010:
  - was **5% higher** than in the corresponding quarter of 2009;
  - saw essentially no change on a quarterly basis;
- The volume of retail sales in predominantly **non-food stores** in Q2 2010:
  - was **3% lower** than a year previously;
  - has declined on an annual basis for seven successive quarters.

## All retailers

### Value of retail sales, all retailers

Figure 1 shows the total value of retail sales for the period from 2007 to Q2 2010. The marked seasonality is apparent, with retail turnover tending to be largest in the fourth quarter of each calendar year.

**Figure 1 – Total value** (Q1 2007 = 100); non-seasonally adjusted

Comparing the same quarter in a given year with that of a year earlier, the period from the start of 2007 to mid-2008 saw growth rates in the total value of retail sales of generally around 6% to 7% (see Figure 2) <sup>1</sup>. In contrast, the last three quarters of 2009 saw total value decline on an annual basis.

Both the first and second quarters of 2010 have seen annual increases in total value of 2%.

<sup>1</sup> The introduction of a Goods and Services Tax (GST) in Jersey in May 2008, at the rate of 3%, was a factor in the greater increase seen in Q2 2008 and also somewhat masked the underlying lower rates of increase in the last six months of 2008.

**Figure 2 – Total Value: annual percentage change <sup>2</sup>; *seasonally adjusted***

The total value of retail sales in Jersey in calendar year 2009, excluding the motor trades (see Notes), was approximately £700 million.

**Volume of retail sales, all retailers**

The volume index series<sup>3</sup> is derived from the value series by use of deflators<sup>4</sup> which removes the effect of price changes.

Comparing the same quarter with that of a year earlier, the period from early 2007 to mid-2008 saw annual growth rates in the volume of retail sales of around 6% (see Figure 3). Since the third quarter of 2008 the total volume of retail sales has decreased on an annual basis, with Q2 2009 recording the largest decrease (-4%). Subsequent quarters have seen annual decreases of smaller magnitudes.

**Figure 3 – Total Volume: annual percentage change; *seasonally adjusted***

In the latest quarter, Q2 2010, the total volume of retail sales was almost the same as a year earlier. The fall of -0.2% represents the lowest annual rate of decline for almost two years.

<sup>2</sup> Annual percentage changes shown as labels in figures are rounded to the nearest integer.  
<sup>3</sup> A volume index is an average of the proportionate changes in the quantities of a specified set of goods between two periods of time.  
<sup>4</sup> The deflators used are a weighted combination of the relevant section level indices of the Retail Prices Index (RPI). Following the recent methodological changes incorporated in the Retail Sales publication produced by the UK Office for National Statistics, the price deflators applied are harmonic means of the corresponding RPI section indices.

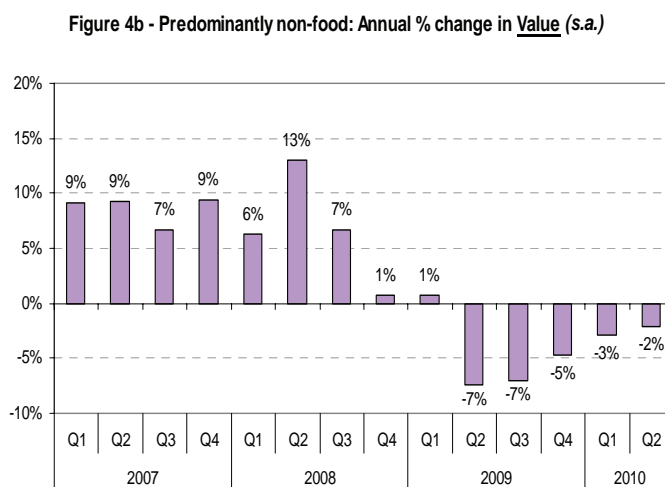

## Sector summaries

The “Predominantly food” sector is comprised of supermarkets, convenience stores and other small food stores. The “Predominantly non-food” sector is comprised of three sub-categories: Household goods; Textiles, clothing and footwear; and Non-food specialised stores. The survey returns within each sub-category were analysed separately and then aggregated to produce value and volume estimates for each sector.

### Value of retail sales (seasonally adjusted)

The value of retail sales in predominantly food stores has increased throughout the period 2007 to 2010 (see Figure 4a).

**Figure 4 – Value of retail sales in predominantly food and non-food stores; annual percentage change; *seasonally adjusted***

s.a. = seasonally adjusted

Predominantly **non-food stores** recorded strong growth in the value of retail sales throughout 2007 and up to Q3 2008 (Figure 4b). A lower rate of increase was recorded in Q4 2008 and Q1 2009 (both up by 1% on an annual basis).

Since Q2 2009, each quarter has recorded a decrease on an annual basis. However, the rate of decline has slowed more recently, from -7% in mid 2009 to -2% in Q2 2010.

### Volume of retail sales (seasonally adjusted)

For predominantly **food stores**, the total volume of retail sales saw small increases on an annual basis throughout 2009 (Figure 6a). The latest quarter, Q2 2010, is up 5% on an annual basis. On a quarterly basis, the total volume of retail sales in predominantly food stores in Q2 2010 was essentially the same as in Q1 2010, following a period of quarterly increases.

For predominantly **non-food stores**, the period from early 2007 to mid-2008 saw annual growth in the volume of retail sales of around 10% (Figure 6b). Since then the last seven quarters (from Q4 2008 to Q2 2010) have recorded decreases in volume on an annual basis. However, the rate of decline has slowed most recently, from an annual rate of -8% in Q2 2009 to -3% in Q2 2010.

Q1 2010 <sup>(r)</sup>	113.0	127.1	102.6	113.0	124.0	103.9	103.3	105.6	102.6
Q2 2010	122.9	132.6	115.7	112.4	126.0	102.3	103.1	105.7	101.3

(r) revised: some estimates for Q1 2010 shown in Table A1 have been revised compared to the previous publication due to the provision of more recent manpower data.

## Notes

1. Overview: Sampled businesses for Jersey Retail Sales Survey report total **retail turnover** on a quarterly basis. The main results of the survey are **total value** and **total volume** estimates in **seasonally adjusted** form:

- **value** estimates reflect the total turnover that businesses have recorded in a given quarter.
- **volume** estimates adjust the value estimates to remove the effect of price changes.

2. Retail: "Retail" is defined as the sales of goods to the general public for personal or household consumption, excluding motor trades.

3. Sample: A representative sample of retail businesses are sampled each quarter, stratified by size. The sample is reviewed twice yearly so that new or expanding businesses can be introduced; in this way, the sample remains representative of the retail trade sub-sector in Jersey.

4. Response rate: the response of businesses to the survey in Q2 2010 was 67% and represented coverage, in terms of employment, of more than half (47%) of Jersey's retail sub-sector.

5. Turnover: is defined as the net value of sales for all outlets under the business name within Jersey. Turnover includes all discounted, credit and deferred payments allowed to customers but not allowances for goods taken in part-exchange.

Total turnover includes:

- Turnover from services (e.g. repairs) as well as those from sales
- All charges for credit given as well as cash prices of credit sales
- Retail sales from outlets to all customers off-Island
- Retail sales via the internet
- Sales of mobile phones but excluding rental and mobile phone cards
- Sales against gift tokens, when token is redeemed not the face value of tokens sold
- Sales against money-off promotion coupons.

Total turnover excludes:

- Sales or commission on lottery tickets
- Receipts from credit card sales not made in the specified quarter
- Any health exemption receipts
- Sales of motor vehicles, parts, accessories and petrol
- Sales from catering facilities to customers
- Sales from other businesses trading on premises and any commission received on such sales
- Any non retail activity (e.g. manufacturing).

6. Classification:

**a) Predominantly Food** – Supermarkets, convenience stores and other stores which sell mainly food, beverages or tobacco;

**b) Household goods** – furniture, electrical appliances, DIY, gardening tools, floor covering, lighting equipment, haberdashery, crockery

**c) Textile, Clothing and Footwear** – clothes, shoes, accessories

**d) Non-Food Specialised goods** – e.g. sports goods, jewellery, craft goods, photographic, music, books, newspapers, office supplies, children's toys, second-hand goods, chemists, health goods, flowers, seeds, fertilizer, pets, medical goods, audio visual/home computing equipment, mobile phones, optical and precision equipment.

7. Methodology:

- Retail turnover for each sub-sector is calculated from the respondent businesses. A ratio estimator approach is applied to estimate the total retail turnover separately for each sub-sector, using the appropriate full-time equivalent (FTE) employment data compiled by the Jersey Manpower Survey;
- Volume data for each sub-sector are derived from value data using price deflators which are base-weighted harmonic means of the corresponding section level indices of the Retail Prices Index;
- Seasonal adjustment is conducted using the Eurostat Demetra software package.
- The revision of seasonally adjusted series is based on that of the UK Office of National Statistics revision policy for the Retail Sales Index.
