

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 4 Free-Text Responses

UserID	Q1. If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q4. How important is it to you that we take actions to reduce Jersey's greenhouse gas emissions?	What things do you think are most important for Jersey to do about climate change? Are there any worries or ideas you have about how we should help the planet? (Please avoid sharing any details that could identify you).
288659464	1	Very important	I think the most important thing is to reduce climate change.
288659511	1	Quite important	We will eventually run out of lithium then we will not be able to make any more
288659482	1	Very important	We should change the cars and heating. (In houses)
288659453	1	Quite important	I think that we should make sure that a lot more electric cars get produced but a lot less diesel and petrol cars
288659461	1	Quite important	I think we need more electric vehicles
288659473	1	Very important	I think that you can tackle the diesel cars and produce more electric cars
288659459	1	Very important	I think we should make all cars electric
288659529	21	Very important	Less fuels in all vehicles
288659448	1	Very important	I believe that we should tackle the use of diesel and petrol cars and the use of the incinerator especially for medical waste.
288659427	1	Very important	I think there should be less green house gasses
288659497	1	Quite important	Recycle stuff
288659458	1	Quite important	I think that we should make sure that a lot more electric cars are used because it is better for the environment
288659505	12	Not important	I don't know many things that are important for climate change however if electric cars are the only cars that will be made after 2030 then I don't think it's a good idea because my family travels a lot and it would take along time to charge.
288659466	4	Quite important	Make less diesel and petrol cars.
288659492	1	Quite important	Finding out different ways to change petrol cars and other vehicles and eventually making planes electric or anything else that makes less green house emissions.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 4 Free-Text Responses

UserID	Q1. If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q4. How important is it to you that we take actions to reduce Jersey's greenhouse gas emissions?	What things do you think are most important for Jersey to do about climate change? Are there any worries or ideas you have about how we should help the planet? (Please avoid sharing any details that could identify you).
288659437	1	Very important	I think that the biggest thing to help with climate change is phasing in electric cars and other vehicles because right now with petrol cars every day the air around us would be getting worse and worse, with electric cars and other vehicles it would make it so that there is less air pollution, it could also help for people that travel a lot because now there are some electric cars that can have that charge for over a month of travelling depending on how much you travel.
288659548	1	Not important	I think we should get rid of some oil cars but not all because some people are car collectors
288659522	1	Very important	I think phasing out petrol and diesel cars is a good idea. But I still worry about lithium batteries running out as more and more people are born in Jersey. Is there a solution to this?
288659451	1	Quite important	The most important would be finding a better source for cars. Although EV is better for the planet, mining lithium can be bad for the environment. And if we carry on without any other fuel source, we will run out and if we do run out, since got rid of diesel and petrol, we may not have any fuel source.
288664700	24	Very important	About the climate change the crops on the planet won't be grown so not many people could eat fresh food
288664674	1	Quite important	That we use less fuel and diesel but not get rid of it completely but if it gets too much then yes get rid of it
288664706	1	Very important	We should use less diesel and petrol
288664697	1	Quite important	To go to electrical cars
288664692	1	Very important	Stop greenhouse gases
288664680	1	Quite important	Increase the speed limit to 60
288664701	1	Not at all important	We should use less diesel

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 4 Free-Text Responses

UserID	Q1. If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q4. How important is it to you that we take actions to reduce Jersey's greenhouse gas emissions?	What things do you think are most important for Jersey to do about climate change? Are there any worries or ideas you have about how we should help the planet? (Please avoid sharing any details that could identify you).
288664694	1	Very important	To turn all yes all cars and road transportation to electric vehicles it will be so much better and also close the incinerator and recycle the stuff we carelessly dump in it .And make heaters electric
288664770	1	Very important	Reduce greenhouse gas in the atmosphere.
288664714	1	Very important	Plant more trees
288664678	1	Very important	I think climate change is extremely dangerous and it should be reduced as much as possible
288664665	1	Very important	We should increase the speed limit on green lanes and main roads as you can go faster to places when using less fuel emissions. We should also have electric generators that don't produce fumes to turn the fumes from the incinerator into fresh oxygen.
288664675	1	1	I am really concerned about the speed of climate change my ideals are: That if there are any more electric cars that means more electricity and the battery's will start to just be chucked out
288664728	1	Very important	I think it's good. Idea because it's good for the environment.
288664677	1	Quite important	We should reduce our emissions
288664775	1	Unsure	I think this is a great idea as EV cars produce less greenhouse gas as a Petrol/Diesel vehicle.I would not like to remove small vans as they good be a good recourse for plumbers, carpenters, etc. It could be quite bad.
288664715	1	Unsure	I don't have any ideas or worries.
288664673	1	Very important	I think that we should focus on cars as having a car is getting more important in this world so more people are getting them, so it's getting more of a problem every day. I think countries should also try and make electricity in ways which would have less of a carbon footprint.
288672559	1	Quite important	Not that concerned
288672501	1	Very important	

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 4 Free-Text Responses

UserID	Q1. If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q4. How important is it to you that we take actions to reduce Jersey's greenhouse gas emissions?	What things do you think are most important for Jersey to do about climate change? Are there any worries or ideas you have about how we should help the planet? (Please avoid sharing any details that could identify you).
288672566	1	Very important	I think if we don't act soon children will be born into an unsafe environment.
288672592	1	Quite important	No
288672513	1	Very important	Changing the amount of greenhouse gas produced going into the atmosphere
288672631	1	Unsure	The amount of heat we produce
288672537	1	Quite important	Only use EVs, recycle, reduce waste.
288672588	1	Very important	None because there's boats and barricades and plants. They're there for a reason people.
288672597	1	Quite important	I am not that concerned but the sea and the climate is changing
288672524	1	Not important	You can make some changes about the vehicles and heating restrictions for houses. No changes for petrol or diesel cars!
288672529	1	Quite important	My concerns are that we are going to get more natural disasters so it is going to be more harder to survive in this climate
288672734	1	Quite important	Stop heavy machinery and other gas or oil products to be shipped from overseas
288672478	1	Unsure	I'm slightly concerned but if the climate didn't change we would still be in the ice age. We might be putting some gases in the air but we only have recording from around 100 years ago so we do not know if this has happened before and again we would still be in the ice age if the world didnt heat up .
288672616	1	Unsure	It will destroy islands
288672575	1	Very important	I think the most important thing to do about jersey climate change is for there to be less petrol but not to completely take it away because some people will be very mad that they can not drive different petrol cars anymore and they will want to move away which will be a lot of people. If there was one thing to do about the petrol situation is that for not to take it away completely.
288672562	1	Quite important	It is important That we reduce greenhouse gasses but I'm not very worried about how long it takes because it will slowly become better and better for the environment once more electric cars are made and less diesel And petrol cars are imported.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 4 Free-Text Responses

UserID	Q1. If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q4. How important is it to you that we take actions to reduce Jersey's greenhouse gas emissions?	What things do you think are most important for Jersey to do about climate change? Are there any worries or ideas you have about how we should help the planet? (Please avoid sharing any details that could identify you).
288672572	1	Unsure	I think that climate change can be damaging weather wise therefore I think we should try to prevent it from becoming any bigger but I think electric cars are not the answer because people of an age can be deaf or blind of any kind of age but if electric cars come into place than I think there can be way more casualties if people can't see or hear and it's bad enough electric cars are really quite so we could stop climate change or lose some of the population of Jersey.
288672521	1	Quite important	We could stop smoking.
288672768	1	Very important	I think to reduce climate change we could replant more trees and plants into our towns are areas that have useable space for wildlife. My worry is about our cows gradual production of harmful methane damages the ozone layer

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 5 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	<p>Q5. After 2030, Jersey might still allow some petrol and diesel cars to come here. These are:</p> <ul style="list-style-type: none"> • Cars already owned by people who are moving to live Jersey • Cars over 50 years old • Cars adapted for a driver or passenger with a disability • Cars adapted for special purposes e.g. paramedic cars <p>What do you think? Which types of cars should still be allowed? (Please avoid sharing any details that could identify you.)</p>
288659413	1	I think that for the elderly cars yes and disable people yes but not the ambulance and new people
288659464	1	Hybrid cars, electric cars and hydrogen cars
288659511	1	I think that hybrid and electric cars should still be allowed
288659482	1	All the above
288659453	1	I think that there should be hrybrid cars but more battery in them then less petrol tank.
288659461	1	Cars that save life's and electric.
288659473	1	F1 cars because the noise is famous because you can't make that noise with electric F1 cars
288659459	1	I am not sure about cars over 50 years old
288659529	21	Any that are important to people
288659448	1	I think that the use of electric cars and hybrid cars should be allowed and vintage cars. Cars for emergency services and for people with disabilities should be allowed
288659497	1	Vans
288659458	1	I think that there should be cars adapted for disabled people
288659505	12	I think at 2030 there should not be a ban because my dad says that electric cars are bad
288659466	4	I think petrol cars should still be aloud and electric cars.
288659492	1	I think any really expensive cars should be allowed things like a Ferrari or any other car that is being used as a collectible.
288659437	1	I think these exceptions are good because if you have just come to jersey then the fact that they don't have to buy an electric car just if they want to live there will make it so that jersey would be still be a choice to move to if you have a petrol car. I also think that the fact that people with disabilities and adapted cars for them can keep them because if they had to get an electric car they would have to get an electric car adapted to them.
288659548	1	I think all cars should be aloud it would just be advised to get electric so and not get rid of all so you still will be able to buy all, cars but maybe reduce the amount but not all

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 5 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	<p>Q5. After 2030, Jersey might still allow some petrol and diesel cars to come here. These are:</p> <ul style="list-style-type: none"> • Cars already owned by people who are moving to live Jersey • Cars over 50 years old • Cars adapted for a driver or passenger with a disability • Cars adapted for special purposes e.g. paramedic cars <p>What do you think? Which types of cars should still be allowed? (Please avoid sharing any details that could identify you.)</p>
288659522	1	In ten years time, will the 50-year-old cars change to 60-year-old cars? Why are they allowed? Surely they are diesel cars and worse for the environment?
288659451	1	Well, I think that we should keep hybrids and cars over 50 years old because they emit less greenhouse gasses and old cars can be important and very valuable.
288664700	24	I think they should all be used because that means more people will have quicker transportation
288664674	1	Old cars disability cars motorbikes
288664706	1	Electric and hydrogen
288664697	1	Special cars
288664692	1	Let them keep them
288664680	1	All of them
288664701	1	I want to keep petrol cars.
288664694	1	Hybrids not classics because they cause even more damage to the environment also electric and disabled vehicles.
288664770	1	All cars must contain a battery
288664714	1	Tractors
288664678	1	I think reducing petrol and diesel cars is a fabulous idea. But I think immigrants should not be allowed to bring in their petrol or diesel cars. I think having electric cars is a good idea because people will be more aware and stop looking/listening at/to head/phones.
288664665	1	Petrol cars should be banned completely from 2030 and people should get their money back or their cars should be stationary diesel cars banned in 2035 along with hybrids and all other diesel and petrol vehicles.
288664675	1	I think that any old cars should just stay stationary
288664719	1	All cars
288664728	1	I think there should be 0 petrol cars.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 5 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	<p>Q5. After 2030, Jersey might still allow some petrol and diesel cars to come here. These are:</p> <ul style="list-style-type: none"> • Cars already owned by people who are moving to live Jersey • Cars over 50 years old • Cars adapted for a driver or passenger with a disability • Cars adapted for special purposes e.g. paramedic cars <p>What do you think? Which types of cars should still be allowed? (Please avoid sharing any details that could identify you.)</p>
288664677	1	I strongly disagree as having this will mean that natural wonders will be destroyed.I also think that by 2030 the charging stations will not be ready and the charging materials will have to be imported causing more emmissions into the island.I also think that people visiting France or England will not be able to visit as they will not be able to charge their cars
288664775	1	I think you should make the deadline a bit longer.
288664715	1	I think that Hybrid cars should still be allowed.
288664673	1	I agree with all of these ideas but think that once your petrol or diesel car has got to old to use and your over 50 year old car has broken down you should the get a hybrid or electric car (preferably a electric car). For cars that are used for emergencies we should slowly but surely change them all to electric by around 2040.
288672559	1	Vintage car Public transport Emergency Vehicles Disability vehicles
288672501	1	I can't think of any.
288672566	1	I totally agree with what your rules are.
288672592	0	I don't know but I think we should get cars that use water as fuel.
288672513	1	Cars for the disabled and ones for special purposes
288672631	1	Special sport cars/ collector cars
288672537	1	I think that only EV cars should be allowed because ones that use petrol or diesel harm the environment, therefore forcing climate change to happen and cause storms and other things.
288672588	1	Vans (moving to different house). To be honest I don't think we should have any cars. No pollution.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 5 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	<p>Q5. After 2030, Jersey might still allow some petrol and diesel cars to come here. These are:</p> <ul style="list-style-type: none"> • Cars already owned by people who are moving to live Jersey • Cars over 50 years old • Cars adapted for a driver or passenger with a disability • Cars adapted for special purposes e.g. paramedic cars <p>What do you think? Which types of cars should still be allowed? (Please avoid sharing any details that could identify you.)</p>
288672597	1	I think all cars should still be allowed into jersey because if they're not then people who like driving sport cars with petrol (unleaded and diesel). Also JE (Jersey Electricity) can make loads of money from getting electric cars and they can charge more for electric because the are the only main electricity company so how is it fare for other people to pay more just because is a main electricity company. Also it is good for them because they will get more money from their company and then some people may get paid a higher salary. I think it is a bad idea to not let cars into jersey.
288672524	1	I think Hybrid cars should be allowed because they are the perfect type however we could get rid of petrol and diesel cars and get very loud noises on the electric cars.
288672529	1	Cars for people who already love on jersey. Cars for disabled people. Cars over 50 years old. Cars for paramedics. Cars for people just moving in.
288672734	1	I think small business vans should still be allowed if it is more mileage per litre of petrol
288672478	1	I think those are reasonable but also to take away someone's right to import needs to go to a public vote I have been told there was a forum put out but it has not be advertised for example a election so I think it needs to be more advertised and I think petrol and diesel should be allowed in
288672616	1	Petrol and diesel should be allowed because personally I think they are more reliable and some people like the sound feel and look of diesel and petrol cars. Also people who have a hobby of taking part and participating in rally racing would just move from jersey and people who want to watch or start it will move away. I an hear is diesel and petrol is the worst thing in the world and if you get electric cars you will be the best thing in the world even though diesel cars are probably one of the best inventions in the world.
288672575	1	I think EVERY SINGLE CAR SHOULD STILL BE ALLOWED and it should only be encouraged and not forced for everyone to use it will gain other people to use electrical cars and not for people to move.
288672562	1	I agree with all of them except cars already owned by people moving to jersey I think those cars should be a certain way through their life because otherwise they could be new cars which will last another 10 years.
288672572	1	I think any cars like that should be aloud in Jersey but I still think we don't need to ban all cars diesel or petrol cars from Jersey for everyday life.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 5 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	<p>Q5. After 2030, Jersey might still allow some petrol and diesel cars to come here. These are:</p> <ul style="list-style-type: none"> • Cars already owned by people who are moving to live Jersey • Cars over 50 years old • Cars adapted for a driver or passenger with a disability • Cars adapted for special purposes e.g. paramedic cars <p>What do you think? Which types of cars should still be allowed? (Please avoid sharing any details that could identify you.)</p>
288672521	1	Every car.
288672768	1	I think that electric cars should still be allowed because they produce no greenhouse gases, except for the production of lithium for batteries. Along with the rules and requirements for people's rights.
288926730	3	<p>"ambulances and fire trucks"</p> <p>"The cars that pull boats into the water for the coastguard"</p> <p>(although these could be electric)</p> <p>"even tractors should be electric because the air coming out of diesel cars is bad for the farm animals"</p>
288915790	18	<ul style="list-style-type: none"> - Emergency vehicles - Vintage cars for events - Cement rollers - Normal buses: electric buses seem smaller
289642510	27	Emergency vehicles. Classic cars. Disabled driver/passenger cars. Rally cars. Old cars.
289658207	25	We agree with the above.
289728710	10	Special cars if people have a disability emergency cars
289864655	16	Motorbikes are more cost effective and use less fuel so they may be allowed? A smaller engine size also. Smaller cars should be considered? For the same reason.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 6 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q6. How do you think you and your family will be affected by the changes in 2030? For example, will it change how you travel, what car you use, how much things cost, or how clean the air is?	Do you want to share any thoughts about this change? (Please avoid sharing any details that could identify you.)
288659464	1	Both positively and negatively	I think that this change is a good one but it will be hard at the start but it will get better
288659511	1	Both positively and negatively	I think that it is a good idea
288659482	1	Positively	It will make a better environment but it might make some travelling difficult.
288659453	1	Both positively and negatively	I think that we should do this less suddenly and more introduced every year instead of suddenly doing it in 2030
288659461	1	Very positively	No
288659473	1	Unsure	I think that you should be able to get some electrical motorbike
288659459	1	Unsure	No
288659529	1	Positively	I think it is very healthy for the environment and that other countries should contribute in this.
288659448	1	Positively	I think that engineers should be trained in the use of electric cars and hybrid cars and manufactures of supercars should create electric versions.
288659427	1	Both positively and negatively	My parents once thought about moving to electric cars but they thought it would be a hassle to get a charging station in the house or wait at one place whilst it charges. They said if there are more charging stations in places like supermarkets they will reconsider it.
288659458	1	Unsure	I don't have any thoughts
288659505	1	Negatively	I don't like the change because I prefer petrol and diesel cars as in my opinion I think they are smoother when in and electric cars give me a wired feeling
288659466	1	Positively	Don't make the electric cars expensive.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 6 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q6. How do you think you and your family will be affected by the changes in 2030? For example, will it change how you travel, what car you use, how much things cost, or how clean the air is?	Do you want to share any thoughts about this change? (Please avoid sharing any details that could identify you.)
288659492	1	Both positively and negatively	Well obviously it will have some changes as their will be lots of more electric cars which is good as their will be less green car emissions but bad as lots of people probably aimed to have a nice petrol cars which pr things like that
288659437	1	Positively	I think that when these changes are made it would be better for everyone because then the air would be fresher and there would be less air pollution, I also think that when these changes are made the roads would be quieter and more peaceful overall making jersey a nicer place.
288659548	1	Unsure	I do long travels to ski and if electric we might have to do more stops instead of just one stop halfway
288659522	1	Not at all	Petrol and diesel cars will still be allowed till the end of their life, so it shouldn't change for a while. My family have a hybrid car and a petrol car but both are reasonably new now so the petrol car probably won't be got rid of straight away. And the hybrid car still would have a few years left when hybrid cars are stopped from being imported in 2035.
288664674	1	Positively	That maybe transport from the docks would be very difficult
288664706	1	Both positively and negatively	No
288664697	1	Unsure	I think it is a good change
288664692	1	Unsure	Not really
288664680	1	Negatively	My Dads car does 250 miles to the tank in Italy 500 miles to the tank
288664701	1	Not at all	I think we should keep Petral cars
288664694	1	Positively	My thought is that is is a extremely important thing for the community and the environment so that it will also slow down global warming
288664770	1	Both positively and negatively	Try starting small
288664714	1	Both positively and negatively	No

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 6 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q6. How do you think you and your family will be affected by the changes in 2030? For example, will it change how you travel, what car you use, how much things cost, or how clean the air is?	Do you want to share any thoughts about this change? (Please avoid sharing any details that could identify you.)
288664678	1	Very positively	I think reducing petrol and diesel cars is a fabulous idea. But I think immigrants should not be allowed to bring in their petrol or diesel cars. I think having electric cars is a good idea because people will be more aware and stop looking/listening at/to head/phones.
288664665	1	Both positively and negatively	People should have the chance to sell their cars before 2030.
288664675	1	Very negatively	I do not agree with it strongly because also the what will happen to all that petrol that we have
288664719	1	Unsure	No
288664728	1	Both positively and negatively	Positive because my dad's getting new car. Negative because he wants to get petrol car. I'm gonna convince him to get a EV.
288664677	1	Both positively and negatively	No
288664775	1	Not at all	I mean, my family are probably going to get a new electric and we have a petrol car so I don't really have any thoughts.
288664715	1	Negatively	My thoughts are that people with Hybrid cars will be affected.
288664673	1	Both positively and negatively	We would have to buy a new car, but we would be contributing to helping the world a cleaner a better place and would be gradually stopping climate change.
288672559	1	Both positively and negatively	No
288672501	1	Not at all	No.
288672566	1	Very negatively	I think it would be very good so we can breath actual clean air and it will be good for the next generation.
288672592	1	Negatively	No
288672513	1	Positively	I think its really important

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 6 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q6. How do you think you and your family will be affected by the changes in 2030? For example, will it change how you travel, what car you use, how much things cost, or how clean the air is?	Do you want to share any thoughts about this change? (Please avoid sharing any details that could identify you.)
288672631	1	Both positively and negatively	I disagree with this but I think we should have more hybrid cars not full electric though
288672631	1	Both positively and negatively	I disagree with this but I think we should have more hybrid cars not full electric though
288672588	1	Both positively and negatively	Everything leaves a mark. Every car is bad. Mobile devices don't have an output gas.
288672597	1	Both positively and negatively	I would also like to say that it is good because the amount of green house gases and emissions will go down but also it is good to let people have a public vote and let them choose.
288672524	1	Very negatively	It can hurt/ kill more of my pets. It can also effect people who's hearing is not perfect.
288672529	1	Both positively and negatively	Some people may not be to afford electric cars.
288672734	1	Both positively and negatively	I think we should make a exception for the poorer families but 1 car per families
288672478	1	Both positively and negatively	I do and I think the biggest question is do we have the infrastructure. Another thing is we are trusting France with our electricity and they have threatened to turn it off so I'm sure they will again. I'd also like to point out that if a electric car has a lifespan of fifteen years and it takes ten to become carbon neutral due the lithium mining on five years would be carbon neutral so not that much time. Another point that jersey electricity is the only electricity source we know of so it's a monopoly because they can charge whatever they want.
288672616	1	Very positively	I think if you want to go on a road trip to somewhere electric cars need constant charging so you will frequently need to charge

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 6 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q6. How do you think you and your family will be affected by the changes in 2030? For example, will it change how you travel, what car you use, how much things cost, or how clean the air is?	Do you want to share any thoughts about this change? (Please avoid sharing any details that could identify you.)
288672616	1	Very positively	I think if you want to go on a road trip to somewhere electric cars need constant charging so you will frequently need to charge
288672562	1	Positively	It could affect some people
288672572	1	Both positively and negatively	I think this could affect how 18 year olds learn how to drive.
288672521	1	Very negatively	I do not want this change and the government has to make stuff right.
288672768	1	Very positively	I think that this is a great idea and will impact even people which can not afford it very positive thanks to the online market.
288926730	3	Both positively and negatively	My mum uses a diesel car our air will be cleaner and it will help the animals and plants we have in our garden
288915790	18	Both positively and negatively	- Electric tractors might be healthier for the animals around them
289642510	27	Both positively and negatively	N/A
289658207	25	Very positively	'What about the petrol stations?'
289658207	25	Very positively	'What about the petrol stations?'
289864655	16	Both positively and negatively	It may affect some families depending on their vehicles?

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 7 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q7. What would you like to tell the people in Government who are making the rules about stopping petrol and diesel cars from 2030? Do you have any ideas, worries, or messages for them? (Please avoid sharing any details that could identify you.)
288659413	1	Check the sources of where we are getting the elthyium from and not from child labour places
288659464	1	I think that they are doing a good thing but it might not be very popular at the start
288659511	1	Not really
288659482	1	Why are you doing it at 2030?
288659453	1	I wou,d say do it in 2029 but not as much so people get used to it.
288659461	1	No
288659473	1	No
288659459	1	Can you somehow make electric cars charge faster
288659529	1	I don't know there isn't anything that I know to help
288659448	1	I believe that they should try and find ways to responsibly source lithium and other key items for electric cars.
288659497	1	I don't want it to happen because then I can't get a van because they probably won't make electric vans
288659458	1	No I don't have any worries
288659505	1	I don't agree with the change and my family doesn't like it either
288659466	1	I am concerned that at night the electric cars will be silent that people won't notice them so make sure that people have visible clothing and some lights.
288659492	1	Just make some clear rules for it make clear guidelines for what you can and can't do with petrol cars and make a jersey better.
288659437	1	I think that it is good that you are letting people that already have a petrol car have it until it is fully used because then you don't have to sell your petrol car and buy an electric car because some people might prefer their petrol car and at least they can have it until it is fully used.
288659548	1	I think it might make children feel unsafe walking to school and parents worried because electric cars are quite silent so it might be scary for young children and some people might not be happy with the decision and might do stuff they shouldn't do just so they can get all cars as an opinion

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 7 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q7. What would you like to tell the people in Government who are making the rules about stopping petrol and diesel cars from 2030? Do you have any ideas, worries, or messages for them? (Please avoid sharing any details that could identify you.)
288659522	1	I do worry about more people being born in Jersey, therefore gradually there being a need for more lithium batteries. Will the batteries run out? And what rules for road tax are going to be introduced? Will any old person know how to drive an electric car instead of a petrol one?
288659451	1	I hope they are not gone entirely by 2035 because EV's are small and most of my cars are big to fit everyone in.
288664674	1	That after our disability has gone to the max we won't be able to get a new one and that if I order something like a parser from Amazon it would be hard to get to me because that there aren't any diesel boats like cruise ships.
288664706	1	I think that we should start making hydrogen cars
288664697	1	No
288664692	1	Don't worry
288664680	1	There are not enough electric cars or tractors
288664701	1	I don't want to get rid of petrol cars.
288664694	1	That if there is too much electricity there will be a shortage of electricity and the electricity supply will run short
288664770	1	Start small and slowly grow.
288664714	1	I do not want to say anything
288664678	1	Could you maybe do 2035 not 2030
288664665	1	Make the electric cars better
288664675	1	That electric cars are just as bad at the moment because of battery's
288664719	1	Why don't we just make heating all electric
288664728	1	I actually think it's a good thing that we are being planet healthy.
288664775	1	You could just ban like ordinary cars as there might be really rare petrol cars that are in the UK but can't be manufactured in here.
288664715	1	I think that stopping Petrol and Diesel cars is the right move.
288664673	1	I think that the rules should be less strict by 2030 e.g. hybrid cars not just purely electric cars and by 2035 all cars should be electric.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 7 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q7. What would you like to tell the people in Government who are making the rules about stopping petrol and diesel cars from 2030? Do you have any ideas, worries, or messages for them? (Please avoid sharing any details that could identify you.)
288672559	1	No
288672501	1	Don't be to harsh.
288672566	1	Nothing.
288672592	1	No because in march I will start cycling to school.
288672513	1	I request I have is to add some kind of speaker to electric vehicles to make more noise so it's easier to hear
288672631	1	Not full electric cars please
288672537	1	Maybe they could make some special car EV (ambulances, police cars etc.)
288672588	1	Ev=D/Pv. The same. Just leave them alone. + who creates heat? Yeah sure petrol also generates heat but you're treating electric cars as a goody goody. But there just as bad as petrol
288672597	1	No I don't think it is a good idea.
288672524	1	Please could this not happen because it might affected people or cats or dogs.
288672529	1	I have no messages
288672734	1	I think there should be limits on how much electric vehicles cost like 30000 pounds
288672478	1	I think they should encourage it instead of not allowing to import it or export.
288672616	1	Do not stop diesel cars
288672562	1	I just think it's a good way to stop greenhouse gasses
288672572	1	I don't really like this idea because it is making a decision about stopping climate change or losing some of the population.
288672521	1	I think all cars should be let in and just focus about smoking and other stuff because it is ridiculous if your not letting every people buy cars from the England that use petrol and some people might not be comfortable driving electric cars.Good luck how it goes if it goes wrong that's is your problem .
288672768	1	I think that these rules are very fair and deeply consider different situations.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 7 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q7. What would you like to tell the people in Government who are making the rules about stopping petrol and diesel cars from 2030? Do you have any ideas, worries, or messages for them? (Please avoid sharing any details that could identify you.)
288926730	3	Thank you for doing this! It's the children's future not theirs I am worried if people don't have enough money for an electric car. They should make them not too expensive, cheaper than petrol/diesel cars.
288915790	18	- What will happen to all of the electric batteries?
289642510	27	Everybody should have electric cars in the future.
289658207	25	'What about the petrol stations?'
289864655	16	Could it be a little more dangerous because of the lack of being able to hear the electric cars - so people need to be more safety aware - walking and crossing the road People may need to have more money buying or adapting cars - is there a fund for this?

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 8 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q8. What do you think transport in Jersey should look like in the future? <ul style="list-style-type: none"> • How should people get around the island? • What kinds of vehicles should they use? • Should people walk, cycle, or use buses more? • How much should it cost to travel? (Please avoid sharing any details that could identify you.)
288659413	1	I think when you buy the car it is yours and I think they should use ev cars and hybrids
288659464	1	I think that there should be more electric, hybrid and hydrogen cars but mainly hydrogen and electric cars
288659511	1	People will start cycling and running as electric cars are a bit more expensive
288659482	1	There should be less petrol cars and more people in ev's, walking and cycling.
288659453	1	I think people should do more like cycling and walking but if they can not do that they should use hybrid and electric cars.
288659461	1	I am not sure
288659473	1	I think that people should start walking to places un les you are a long way away from the place you need to go to.
288659459	1	Electric cars
288659529	1	I think some things in jeresey should cost less like electric cars to convince people to bye them
288659448	1	I think more cycle tracks should be introduced to encourage the use of bikes and electric buses and buses for under 21 ones should be free.
288659497	1	People should walk around or ride a bike
288659458	1	In electric cars Electric cars Walk Not that much
288659505	1	I think transport is fine currently however I would like to see flying cars in 2060 or water car at least
288659466	1	People should walk or cycle to school to save our planet but if they are far away from school it is ok for them to use cars and buses.
288659492	1	I think travel in the future will hopefully have sustainable cars making it overall cheaper and their will be lots more electric cars.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 8 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q8. What do you think transport in Jersey should look like in the future? <ul style="list-style-type: none"> • How should people get around the island? • What kinds of vehicles should they use? • Should people walk, cycle, or use buses more? • How much should it cost to travel? (Please avoid sharing any details that could identify you.)
288659437	1	I think that you should try to encourage people to cycle around until there are more electric alternatives and that when there are electric cars I think that you should encourage people to use them so that less petrol is polluting the air.
288659548	1	I think they shouldn't get lots of electric cars but try and get people to walk cycle and maybe even run to get were they want to be and it should be less expensive for cars and fuel and even batteries and swim more and not stay inside then get in the car maybe have a workout then go on a run to work or cycle and delivering you could make electric boats and ferry's so they can use less fuel but still do have oil things and not be ashamed that all your friends have electric and you don't and be proud.
288659522	1	I believe people should use bikes and buses and walk more, especially while an electric car is charging. I do believe electric cars are better for the environment, as long as the car (and the battery) is recycled. Electric buses will be good because lots of people can travel on a piece of transport, having to be charged every so often.
288659451	1	Most should be electric, but there will still be a few petrol and hybrid cars and maybe some hydrogen ones.
288664700	1	I think it will be a lot more people doing more exercise because there will be less cars
288664674	1	Good but hard to get used to especially for me and my family.
288664706	1	We should travel in electric and hydrogen cars
288664697	1	Electric cars Walk Less than it costs at the moment
288664692	1	A lot
288664680	1	Petrol is allowed diesel is not allowed by 2035
288664701	1	We can have more electric cars but we should still be able to drive petrol cars.
288664694	1	Only electric vehicles
288664770	1	All electric cars that contain no lithium.

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 8 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q8. What do you think transport in Jersey should look like in the future? <ul style="list-style-type: none"> • How should people get around the island? • What kinds of vehicles should they use? • Should people walk, cycle, or use buses more? • How much should it cost to travel? (Please avoid sharing any details that could identify you.)
288664714	1	I do not know
288664678	1	Drive/cycle/walk Car/bike/feet
288664665	1	We should have solar panels for our EV's and the Government of Jersey should have their own salt farm for lithium by the sea from salt water and clean the remaining water into drinking water.
288664719	1	Electric cars cost more money to buy and you have to charge it with electricity which comes out of our electricity bills which means it is more expensive meaning some people who are struggling with financial issues can't afford an electric car and if they do get an electric car they might go homeless .
288664728	1	I think it's gonna look great the airs gonna be much more fresh.
288664677	1	They should keep petrol cars as people can't go to any other places outside of Jersey
288664775	1	We should walk more because it is healthier.We should use vans and cars.
288664715	1	I think that transport in Jersey should have people in Electric (and Hybrid) cars, people cycling and walking to school. Maybe scooters as well.
288664673	1	I think there should be more zero-emission buses and more bus routes so more people can use a bus to get to school. I also think that having an electric car should be cheaper so more people will have them and more people should try to travel by bike or walk if they can.
288672559	1	More electric but not all electric
288672501	1	More walking less diesel busses.
288672566	1	It will be so much better for the environment.
288672592	1	Bus, water powered cars, bike.
288672513	1	I think it should be a lot more environmentally friendly and hopefully they'll become cheaper
288672631	1	More hybrid cars
288672537	1	Only EV cars, louder noise produced, more electric bikes.
288672588	1	Walk, cycle, skateboard, scooter. Maybe even Segway. :D

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 8 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q8. What do you think transport in Jersey should look like in the future? <ul style="list-style-type: none"> • How should people get around the island? • What kinds of vehicles should they use? • Should people walk, cycle, or use buses more? • How much should it cost to travel? (Please avoid sharing any details that could identify you.)
288672597	1	I think it should carry on how it is now but also I think you should think about doing a public vote because then it is not just you who decided but it is the whole of jersey.
288672524	1	People should get around the island by walking or possibly cycling. They should have a very minimum amount of vehicles and should get around by foot or by cycling. They should do all those things because buses use the same amount of petrol as a car but carry so many more people. It should cost slightly more expensive to persuade people to travel by foot.
288672529	1	I think people should travel in whatever they want to but it would cost more to own a petrol car in jersey
288672734	1	Mostly electric vehicles no cranes or heavy machinery and factory's should also be banned
288672478	1	I think we should just reduce cars overall because we should walk instead of cars
288672616	1	A mix not all electric vehicles
288672562	1	Electric cars walking cycling or buses
288672572	1	The same as it is now because people can make their own decisions if they want to walk or cycle or drive diesel or drive electric and many more decisions.
288672521	1	It would be more unsafe and there will be more deaths because of the person who proposed and there will be more electricity bills.
288672768	1	I think Jersey in the future should be all electric and one of the cleanest places left in the future. Also I think that more people will start to cycle and walk considering the planet and other people's well-being.
288926730	3	I hope more people will take the bus or cycle. Make the buses much cheaper or free or give everyone a bus pass.
288915790	18	- Buses should be free - Taxis should be less as people can't always afford them

2030 Phase-Out of Petrol and Diesel Vehicles – Consultation Report - Appendix 15: Primary School Survey – Question 8 Free-Text Responses

UserID	If this is a group response, approximately how many people contributed to it? (Please enter a number)	Q8. What do you think transport in Jersey should look like in the future? <ul style="list-style-type: none"> • How should people get around the island? • What kinds of vehicles should they use? • Should people walk, cycle, or use buses more? • How much should it cost to travel? (Please avoid sharing any details that could identify you.)
289642510	27	People should use more buses and bikes. People should use electric cars. People should walk if the distance is short enough.
289658207	25	People should walk more as Jersey is only small! We should walk, cycle and use mostly electric cars. It shouldn't be expensive to drive.
289728710	10	More electric cars so the air will be cleaner more bicycles
289864655	16	Affordable electric vehicles More cycle lanes to encourage cycling Grant for electric cars Water Taxis? Walking to be encouraged Public transport to be cheaper or free Re-chargeable - Segway which would be cheaper options
