Complaint

**Dept:**  
planning and building, Plemont headland

**Details:**  
I do not want to see the old holiday camp area above Plemont being developed into a housing area, even though there are fewer houses suggested now and some land is offered as 'returned to nature'. It is a very special area of 'cliffs and headlands, prized for remoteness and feelings of wilderness, which has a wide public appeal, is important to tourism and would take 50 years to regenerate and is not recreatable. It needs management to enhance the quality of the habitat for indigenous animals,' the rare agile frog and reptiles, lizards and possibly slow worms and grass snakes. This is stated in the Planning and Building's own website, so any development is going against its own advice and it would have a massively 'deleterious impact on the character of the area'. another quote. 7,000 Jersey people have protested against development on our headlands, enough is enough. Do you want another outcry against Planning's bad decisions like you have had against the disgusted response to the rape of the Portelet headland. We have too many people in Jersey now, we do not need to encourage any more to come and live here, our infrastructure is creaking and groaning as it is and the cost is not economically viable, in my opinion. NO to development on Plemont or any other coastal area. Planning used to be called the Beauty Natural, they do not look after the natural beauty of the Island, they desecrate it, please STOP now!. Take care of our beautiful island for future generations.
