

Jersey House Price Index

First Quarter 2018

Summary

In the first quarter of 2018:

- on a **rolling four-quarter basis**, the mix-adjusted average price of dwellings sold during the year ending Q1 2018 was 3% higher when compared with the year ending Q4 2017
- the **quarterly** seasonally adjusted mix-adjusted average price in Q1 2018 was 6% higher than in the previous quarter
- on an **annual basis** the mix-adjusted average price in Q1 2018 was 12% higher than the corresponding quarter in 2017 (Q1 2017)
- most individual property types recorded higher mean property prices in Q1 2018 compared with Q4 2017, with 1-bedroom flats the only property type to record a decrease in mean price
- the **turnover** of properties was lower than both the previous quarter and the corresponding quarter of 2017
- overall **housing market activity**, on a rolling four-quarter basis, was 2% higher than in the previous quarter
- on a rolling four-quarter basis, **rental prices** in Jersey were essentially unchanged during the year ending Q1 2018 when compared with the year ending Q4 2017

Overall mix-adjusted Index

The Jersey House Price Index measures the combined average price of 1- and 2-bedroom flats together with 2-, 3- and 4-bedroom houses. The index includes share transfer properties.

Figure 1 shows the Jersey House Price Index from 2008 to date on a non-seasonally adjusted basis and the rolling four-quarter average (see [Note 6](#) and [Appendix A](#)).

Figure 1 – Jersey House Price Index, Q1 2008 to Q1 2018

(2002 = 100; including share transfer properties and non-seasonally adjusted)

On a rolling four-quarter basis, the Jersey House Price Index during the year ending Q1 2018 was 3% higher when compared with the year ending Q4 2017.

The quarterly seasonally adjusted mix-adjusted average price in Q1 2018 was 6% higher than in the previous quarter and on an annual basis the mix-adjusted average price in Q1 2018 was 12% higher than the corresponding quarter in 2017 (Q1 2017).

Individual property types - 1-bedroom flats

The mean prices for 1-bedroom flats are shown in Figure 2.

Figure 2 – Mean prices (£,000) for 1-bedroom flats, Q1 2002 to Q1 2018

Following the sharp increase in mean prices early in 2008, the remainder of 2008 and 2009 saw the mean price of 1-bedroom flats remain essentially stable at around £230,000. During 2010 and 2011 the mean price of this property type decreased, largely due to an increase in turnover of lower priced share transfer properties. Since that time, the mean price has slowly increased with the annual average in 2017 being £227,000.

The mean price of 1-bedroom flats sold in the latest quarter was **£224,000**, which was around £11,000 lower than the previous quarter (Q4 2017) and around £3,000 lower than the annual average of the previous calendar year (2017). Figure 3 shows the distribution of prices for these properties sold in the last two quarters.

Figure 3 – Price distributions for 1-bedroom flats, Q4 2017 and Q1 2018

The *median* price of 1-bedroom flats sold in the latest quarter was £225,000 (£1,000 higher than the mean price) and the largest volume sold (almost 25% of total transactions) was in the £160,001 - £190,000 price bracket.

Table 1 – Mean prices for 1-bedroom flats

1-Bed Flats	2015				2016				2017				2018
	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1
Price (£,000)	201	216	212	227	201	228	212	230	215	231	224	235	224

The Q1 2018 mean price has a 95% confidence interval of \pm £13,000

Individual property types - 2-bedroom flats

The mean prices for 2-bedroom flats are shown in Figure 4.

Figure 4 – Mean prices (£,000) for 2-bedroom flats, Q1 2002 to Q1 2018

Following a period of stability throughout 2008 and 2009, when the mean price of 2-bedroom flats was around £320,000, the subsequent two years saw increases, taking the annual mean price of this property type to around £340,000 in 2012. Since then the mean price of 2-bedroom flats has generally remained around this level.

The mean price of 2-bedroom flats sold in the latest quarter was **£420,000**, which was around £51,000 higher than the previous quarter (Q4 2017), £65,000 higher than the annual average of the previous calendar year (2017) and the highest recorded quarterly average to date. This increase in prices was driven largely by a number of properties sold in higher priced new developments in the latest quarter.

Figure 5 shows the distribution of prices for these properties sold in the last two quarters.

Figure 5 – Price distributions for 2-bedroom flats, Q4 2017 and Q1 2018

The *median* price of 2-bedroom flats sold in the latest quarter was £365,000 (£55,000 lower than the mean price) and the largest volume sold (almost 25% of total transactions) was in the £300,001 - £350,000 price bracket.

Table 2 – Mean prices for 2-bedroom flats

2-Bed Flats	2015				2016				2017				2018
	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1
Price (£,000)	335	301	347	343	320	359	345	361	344	346	356	369	420

The Q1 2018 mean price has a 95% confidence interval of ± £30,000

Individual property types - 2-bedroom houses

The mean prices for 2-bedroom houses are shown in Figure 6.

Figure 6 – Mean prices (£,000) for 2-bedroom houses, Q1 2002 to Q1 2018

The mean price of 2-bedroom houses sold from 2008 to 2010 was between £400,000 and £410,000. The mean price of this property type subsequently decreased, with the annual average price recorded in each year from 2011 to 2013 ranging from approximately £375,000 to £390,000.

In the latter half of 2014 the mean price of 2-bedroom houses rose above £400,000 for the first time since early-2011 and has continued to remain above this level except for a downward fluctuation seen in Q4 2015 and Q1 2016.

The mean price of 2-bedroom houses sold in the latest quarter, at **£452,000**, was £25,000 higher than the previous quarter (Q4 2017), £32,000 higher than the 2017 average and the highest recorded quarterly average to date. Figure 7 shows the distribution of prices for these properties sold in the last two quarters.

Figure 7 – Price distributions for 2-bedroom houses, Q4 2017 and Q1 2018

The *median* price of 2-bedroom houses sold in the latest quarter was £425,000 (£27,000 lower than the mean price) and the largest volume sold (almost 35% of total transactions) was in the £380,001 - £440,000 price bracket.

Table 3 – Mean prices for 2-bedroom houses

2-Bed Houses	2015				2016				2017				2018
	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1
Price (£,000)	438	418	443	394	396	421	440	407	404	424	420	427	452

The Q1 2018 mean price has a 95% confidence interval of ± £52,000

Individual property types - 3-bedroom houses

The mean prices for 3-bedroom houses are shown in Figure 8.

Figure 8 – Mean prices (£,000) for 3-bedroom houses, Q1 2002 to Q1 2018

After a period of strong growth from 2006 to early 2008, the mean price of 3-bedroom houses remained relatively stable throughout the subsequent four-year period from 2008 to 2011, at between £510,000 and £520,000.

At the end of 2011 the mean price of this property type fell below £500,000 for the first time since 2007 and remained below this level for almost three years. In Q2 2014 it once again rose above the £500,000 mark and it has subsequently remained above this level.

The mean price of 3-bedroom houses which sold in the latest quarter was **£586,000** which was £13,000 higher than the previous quarter (Q4 2017), and £30,000 higher than the 2017 average. Figure 9 shows the distribution of prices for these properties sold in the last two quarters.

Figure 9 – Price distributions for 3-bedroom houses, Q4 2017 and Q1 2018

The *median* price of 3-bedroom houses sold in the latest quarter was £566,000 (£20,000 lower than the mean price) and the largest volume sold (almost 25% of total transactions) was in the £460,001 - £520,000 price bracket.

Table 4 – Mean prices for 3-bedroom houses

3-Bed Houses	2015				2016				2017				2018
	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1
Price (£,000)	524	503	530	545	516	519	538	555	541	549	560	573	586

The Q1 2018 mean price has a 95% confidence interval of ± £31,000

Individual property types - 4-bedroom houses

The mean prices for 4-bedroom houses are shown in Figure 10.

Figure 10 – Mean prices (£,000) for 4-bedroom houses, Q1 2002 to Q1 2018

Although this category of property has seen some volatility in price on a quarterly basis since 2008, for the most part the mean price of this property type has fluctuated around £700,000. More recently from Q3 2015 we have seen the average recorded price increase, with mean prices exceeded £800,000 for the first time in Q1 2016.

The mean price of 4-bedroom houses which sold in the latest quarter was **£949,000**, an increase of £65,000 compared to the previous quarter and £114,000 higher than the annual average for 2017. This most recent increase in prices was driven by an increased number of higher value properties (greater than £1,000,000) transacting in the most recent quarter.

Figure 11 shows the distribution of prices for these properties sold in the last two quarters.

Figure 11 – Price distributions for 4-bedroom houses, Q4 2017 and Q1 2018

The *median* price of 4-bedroom houses sold in the latest quarter was £828,000 (£101,000 lower than the mean price) and the largest volume sold (over 25% of total transactions) was in the greater than £1,100,001 price bracket.

Table 5 – Mean prices for 4-bedroom houses

4-Bed Houses	2015				2016				2017				2018
	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1
Price (£,000)	707	708	769	781	828	829	811	832	810	804	840	884	949

The Q1 2018 mean price has a 95% confidence interval of ± £127,000

Individual property types - Combined

Each of the mean prices for the period of 2002 to date, for the individual categories of dwelling are shown in Figure 12.

Figure 12 – Mean prices (£,000) for the individual property types, Q1 2002 to Q1 2018

When comparing the different property types it can be seen that:

- most property types recorded increases in mean prices in the most recent quarter
- the gap between the mean prices of 2-bedroom flats and houses narrowed considerably this quarter, driven by increased prices of 2-bedroom flats
- 4-bedroom houses recorded the largest increase in mean prices this quarter, increasing the price gap between this type of property and all other types
- 1-bedroom flats were the only property type to record a decrease in mean price resulting in a larger price gap between this type of property and all other types

Turnover

309 eligible properties (see [Note 2](#)) were sold in Jersey in the latest quarter, Q1 2018.

A degree of caution is required in making comparisons between quarters due to the variation in the frequency of sittings of the Royal Court and due to seasonal variations. Nevertheless, the number of properties sold in Q1 2018 was:

- lower than both the previous quarter and the corresponding quarter of 2017

Figure 13 – Number of dwellings included in the Jersey House Price Index by property type

Table 6 - Number of dwellings included in the Jersey House Price Index by property type

		Flats		Houses			Total	Bulletins published
		1-bed	2-bed	2-bed	3-bed	4-bed		
2015	Q1	64	44	34	84	38	264	6
	Q2	74	49	45	101	59	328	6
	Q3	60	53	47	92	44	296	6
	Q4	63	61	47	132	63	366	7
	Total 2015	261	207	173	409	204	1,254	25
2016	Q1	58	46	34	103	43	284	6
	Q2	62	96	23	105	45	331	6
	Q3	77	78	38	134	62	389	7
	Q4	78	70	58	144	56	406	6
	Total 2016	275	290	153	486	206	1,410	25
2017	Q1	86	76	30	84	45	321	6
	Q2	102	108	49	116	49	424	6
	Q3	64	72	54	120	55	365	7
	Q4	84	121	42	100	49	396	6
	Total 2017	336	377	175	420	198	1,506	25
2018	Q1	51	89	23	106	40	309	6

In Q1 2018 share transfer transactions (see [Note 3](#)) accounted for 71% of all eligible flat sales, a higher proportion than that recorded in calendar year 2017.

Housing Market Activity

First Quarter 2018 Results

The Jersey Housing Market Activity Index measures the total market activity of 1- and 2-bedroom flats and 2-, 3- and 4-bedroom houses in Jersey (see [Note 8](#)). The index includes share transfer properties.

Figure 14 shows the Jersey Housing Market Activity Index from 2002 to date as a rolling four-quarter average (see [Note 8](#) and [Appendix B](#)):

Figure 14 – Jersey Housing Market Activity Index
(2002 = 100; including share transfer properties and on a rolling four-quarter basis)

On a **rolling four-quarter basis**, the total activity of the Jersey housing market during the year ending Q1 2018 was 2% higher when compared with the year ending Q4 2017.

A degree of caution is required in making comparisons between quarters due to seasonal variations; nevertheless, on a **quarterly** basis:

- the total market activity in Q1 2018 was 18% lower than in the previous quarter (Q4 2017)
- the total market activity in Q1 2018 was 8% higher than the corresponding quarter in 2017 (Q1 2017)

Comparison with Guernsey

The Guernsey comparable¹ mix-adjusted average price of properties sold in Jersey in the most recent quarter was £525,000. This is £118,000 higher than the mix-adjusted average price of Local Market properties sold in Guernsey of £407,000.

In Guernsey, the mix adjusted average purchase price for Local Market properties in the first quarter of 2018 was 3.2% lower than in the previous quarter and 5.8% lower than in the same quarter of 2017.

Turnover in Guernsey during the first quarter of 2018 was 14% lower than the previous quarter and 9% higher than the corresponding quarter of 2017.

Comparison with United Kingdom

The UK House Price Index in the first quarter of 2018 (January to March 2018) was 4% higher on an annual basis (non-seasonally adjusted) and 1% higher on a quarterly basis (compared with October to December 2017, seasonally adjusted). On a rolling four-quarter basis, the mix-adjusted index for the UK was 1% higher than in the previous quarter.

The mix-adjusted average prices of dwellings sold in the UK (overall and by region) in the latest quarter are shown in Table 7.

Table 7: Mix-adjusted average prices in Jersey and the UK (in £,000's)

	Q1 2018
Jersey	496
UK	224
England	241
Wales	153
Scotland	146
Northern Ireland	130
London	476
South East (excluding London)	321
East	290
South West	251
West Midlands (region)	189
East Midlands	185
Yorkshire & The Humber	156
North West	157
North East	125

¹ The Guernsey mix-adjusted price uses a different methodology to the current Jersey House Price Index to calculate the average property price. For the sake of comparison, that same methodology has been used to create a comparable figure for Jersey.

Notes

1. Data sources:

The principal data sources on the transaction prices of property sales used in the Jersey House Price Index are:

- the Jersey Property Bulletin for freehold and flying freehold properties;
- the States of Jersey Income Tax Department for share transfer transactions.

The above price data are supplemented by information on the type and size of each property provided by the States of Jersey Population Office.

2. Excluded properties:

Derelict buildings, commercial properties with associated residential units, apparent intra-family transactions, retirement community developments and properties designated by the States of Jersey solely for purchase by first-time buyers are excluded from the final data set from which the average prices and the Index are determined. Furthermore, due to the small numbers of properties and high variability of prices, the following categories of dwelling are also excluded: bedsits; 3 or more bedroom flats; 1 and 5 or more bedroom houses; and multi-dwelling properties. New dwellings, other than those removed by the above exclusion criteria, are implicitly included in the final data set.

3. Share transfer transactions:

Sales occurring via share transfer are not processed through the Royal Court and hence do not appear in the Jersey Property Bulletin. Price data are instead provided by the States of Jersey Tax Department. Share transfer transactions have constituted around three-fifths of all sales of flats since Q1 2002, with the proportion varying between half and three-quarters at the quarterly level as new developments come onto the market.

Although the transaction prices of properties purchased by share transfer were not included in the compilation of the Jersey House Price Index prior to Q1 2011, the Land Transaction Tax, which came into effect on 1st January 2010, has enabled the transaction prices of properties purchased by share transfer to be recorded. Share transfer property transactions are therefore now incorporated in the compilation of the Jersey House Price Index.

In respect of these transactions, the value recorded in the Land Transaction Tax data will only reflect the value of the shares transferred that confer a right of occupation to a dwelling within their articles of association. They will therefore not include any transactions that do not relate to a dwelling, such as the separate sale of parking spaces and storage areas which may ordinarily be included in the sale price of other property types.

Comparative studies have shown that including share transfer properties in the assembly of the House Price Index does not significantly affect annual or quarterly percentage changes, although including share transfer properties does reduce the level of the mix-adjusted mean property price by around 8% - see Annex B of "[Jersey House Price Index – First Quarter 2011](#)", States of Jersey Statistics Unit, May 2011.

4. Mix-adjusted average price

The mix-adjusted average price of dwellings is calculated by weighting together the geometric mean price for each of the following five categories: 1- and 2-bedroom flats; 2-, 3- and 4-bedroom houses ("houses" includes houses and bungalows). The resulting mix-adjusted average dwelling price (see [Note 5](#)) is converted into the Jersey House Price Index (based to 100 for calendar year 2002).

5. Mix-adjustment:

In order that the average price in a given period is independent of the particular "mix" of properties sold in that period, a "mix-adjusted" average is calculated for each period by weighting each property type by a constant proportion.

Each year revised property-type weights are incorporated within each Q1 analysis, derived from the full preceding three-year period and including share transfer properties. In order to produce a continuous index series over time, the Q1 results are chain-linked.

It should be emphasised that, as a consequence of re-weighting, mix-adjusted mean prices will not be comparable between calendar years, although they will be comparable within each calendar year. In order to calculate change between years, the mix-adjusted index should be used.

6. Four-quarter rolling average

Due to the relatively low turnover of properties in Jersey, the mix-adjusted House Price Index is susceptible to fluctuations which occur due to variance in the mix of properties sold from one quarter to another, in terms of quality, location and age, particularly when a number of properties from a new development become available for purchase in the same period. To moderate such effects, the Jersey House Price Index is presented on a rolling four-quarter basis in Figure 1.

7. Seasonal adjustment

Housing markets can, in principle, exhibit seasonal effects that affect property prices. In order to enable meaningful quarter-on-quarter comparison, the mix-adjusted house price index is seasonally adjusted using the Eurostat Demetra software package.

Seasonal adjustment is based on ongoing estimation of seasonal trends and as such is subject to revision. In order to ensure a reasonably stable series of data for the user, the seasonal model is revised once a year, in Q1, at which point the entire historic series will potentially be revised. These revisions are welcome as they derive from an expanded set of data and lead to better estimates of the seasonal pattern. Throughout the calendar year the most recent model will be utilised and therefore the quarterly figures will not be subject to revision.

All other figures presented in this report, are based on the non-seasonally adjusted measures, unless otherwise stated.

8. Jersey Housing Market Activity Index

The Jersey Housing Market Activity Index is a derived index compiled from existing data sourced to produce the Jersey House Price Index and combines the mix adjusted average price of dwellings sold in Jersey with the total number of transactions that occurs during the same period to provide an indication of the total market activity.

The principal data sources are therefore the same as utilised for the Jersey House Price Index, and the list of excluded properties is the same as listed in [Note 2](#) above.

In respect of share transfer properties, whilst the individual share transfer transactions were not included in the compilation of the Jersey House Price Index prior to Q1 2011, the total number of transactions in each period were recorded via the share transfer consent process. This has allowed us to provide a full historical series back to Q1 2002, when the current House Price index methodology commenced.

The nature of the Jersey property market is that the turnover of properties is susceptible to seasonal fluctuations and therefore to moderate such effects, the Index is presented on a rolling four-quarter basis.

Table A1: Jersey House Price Index (including share transfer properties)

Jersey Private Sector Rental Index

Statistics Jersey published a rental index from 2007 until 2012 using prices recorded by the Population Office. The index has not been produced since December 2012 following a change in law that meant the Population Office no longer recorded this data.

Since June 2015, Statistics Jersey has been collecting data in order to produce a revised index and this was first published in the Second Quarter 2016 House Price Index report.

The revised index uses advertised rental prices from both internet and classified adverts. Other jurisdictions currently use this method where there is no suitable administrative data source. The index is:

- mix adjusted
- weighted to reflect the private rental property stock on the island
- chain linked to the original Jersey Private Sector Rental Index

Due to the small numbers of properties and high variability of rents, the following categories of dwelling are excluded: 3- or more bedroom flats, 1-bedroom and 5- or more bedroom houses. All non-domestic dwellings are also excluded. The average (geometric mean) rental price of dwellings is calculated by weighting together the average rents for each of the following categories: bedsits, 1- and 2- bedroom flats and 2-, 3- and 4-bedroom houses. "Qualified" (entitled and licensed) and registered are also weighted separately.

As in the methodology for the Jersey House Price Index, to ensure the average rental cost in a given period is independent of the particular "mix" of properties recorded in that period, a "mix adjusted" average is calculated for each period by weighting each property type by a constant proportion based on details of the rental market stock gathered in the 2011 census.

The resulting mix-adjusted average rental price is converted into the Jersey Private Sector Rental Index (based to 100 for calendar year 2002).

Figure B1 and Table B1 below detail this revised index

Figure B1 – Jersey Private Sector Rental Index, Q1 2002 to Q1 2018
(2002 = 100; non-seasonally adjusted)

- On a rolling four-quarter basis, rental prices in Jersey was essentially unchanged during the year ending Q1 2018 compared with the year ending Q4 2017
- On a quarterly basis, rental prices in Jersey have increased by 2% compared to the previous quarter and essentially unchanged compared to the corresponding quarter of 2017 (Q1 2017).

Table B1: Jersey rental index

		Index	Rolling four-quarter average
2004	Q1	104.1	104.6
	Q2	104.0	104.2
	Q3	107.8	104.9
	Q4	103.3	104.8
