Foreword

‘Jersey in Figures, 2014’ presents economic, social and environmental information about Jersey. The publication aims to be a convenient reference book for government members, public and private institutions, the general public and visitors to the Island.

‘Jersey in Figures 2014’ is published by the States of Jersey Statistics Unit. We are grateful to all States departments and private organisations for providing the information contained in this edition.

In aiming to keep Jersey in Figures as a pocket sized publication, we publish only a summary of the information that is produced about Jersey; further information can be obtained from the various references which are given throughout. Most referenced material published by the States of Jersey can be viewed or downloaded from the website www.gov.je whilst all information published by the Statistics Unit can be accessed at www.gov.je/statistics.

I trust readers will continue to find Jersey in Figures a useful reference. As always, comments relating to the content are most welcome.

Duncan Gibaut

An introduction to Jersey

Jersey is the largest of the Channel Islands with an area of 45 square miles (120 km$^2$) and is situated 14 miles off the north-west coast of France and 85 miles from the south coast of England.

Jersey is a Crown Dependency and as such is not part of the UK. The Island is not represented in the UK parliament, whose Acts only extend to Jersey if expressly agreed by the Island that they should do so.

The Island of Jersey is divided into 12 parishes: St. Brelade, St. Clement, Grouville, St. Helier, St. John, St. Lawrence, St. Martin, St. Mary, St. Ouen, St. Peter, St. Saviour and Trinity. Each parish is presided over by an elected Connétable, who deals with issues relating to civil matters.

The legislature of the Island is called 'The States of Jersey', members of which are elected by the population, males and females aged 16 or over. The States is comprised of the Bailiff, who is President of the Assembly, the Lieutenant-Governor, 8 Senators, the Connétables of the 12 parishes, 29 Deputies, the Dean of Jersey, the Attorney-General and the Solicitor-General. All members have the right to speak in the States Assembly but only the elected members (the Senators, Connétables and Deputies) have the right to vote. The Bailiff, who is appointed by the Crown, acts as Speaker.
The system of government is comprised of a Council of Ministers and several Scrutiny Panels. There are 49 States members, with a maximum of 21 members in ministerial positions.

The economy of Jersey saw a great deal of change during the latter part of the 20th century. As trade markets became more international and global travel increased, traditional Jersey industries such as agriculture and tourism were superseded by financial services as the dominant industry in Jersey. The Financial services sector (which includes banking, trust and company administration, fund management and administration, accountancy and legal activities) has grown such that it now accounts for around two-fifths of total economic activity in Jersey and employs about a quarter of the workforce.
## Key Indicators

The area of St Helier includes reclaimed land area of 961 Vergées (2 km²).

Note: km² rounded independently to nearest integer

In 2012, around a quarter of the land was built upon, over a half was cultivated and a sixth was natural vegetation.

"Built environment" includes man-made surfaces such as buildings, roads, footpaths, swimming pools, gardens, harbour areas etc. "Natural Vegetation" includes woodlands, dunes, grassland, cliffs and shrub. "Miscellaneous" includes parks, golf courses, cemeteries, quarries and sports fields. “Glasshouses” only includes glasshouses and polytunnels over 200m². “Inland Water” includes ponds, reservoirs.

1 Including reclaimed land of St Helier.
2. National Accounts

Two measures of Jersey’s economy are produced by the Statistics Unit on an annual basis: Gross Value Added (GVA) and Gross Domestic Product (GDP). GVA shows the value of economic activity taking place in Jersey and enables a breakdown by each sector of the economy. GDP is the traditional aggregate measure of an economy which requires specific treatment for services indirectly charged by financial services institutions (FISIM).

Total GVA in 2013 was £3.7 billion (current year values), essentially unchanged in real terms on an annual basis.

In 2013 values of income, GDP was estimated as £3,688 million and £3,703 million in 2012 and 2013, respectively. In real terms, GDP in 2013 was therefore essentially unchanged on an annual basis, differing by 0% from that in 2012.

For further information see: Measuring Jersey’s Economy, GVA and GDP 2013 report

Gross Value Added (GVA) by sector

The GVA for each sector of Jersey’s economy is shown in Figure 2.1. Financial services accounted for about two-fifths (42%) of total GVA in 2013.

Figure 2.1: Gross Value Added by sector\(^2\), 2013

\(^2\) The ‘Other business activities’ sector is made up of a range of services (principally businesses servicing households or other businesses) and includes rental income of private households, both actual and imputed.

<sup>r</sup> = revised, <sup>p</sup> = provisional
Table 2.1 shows total and sectoral GVA from 2001 onwards in latest year (2013) values of income. In real terms, total GVA in 2013 was essentially unchanged on an annual basis, down by £7 million.

Historically, there has been a strong relationship between the finance industry and the overall Jersey economy (See Figure 2.2).

Figure 2.2: Gross Value Added (basic) at constant year (2013) values of income

The overall real term growth recorded up to 2000 was driven by the Finance sector. The subsequent periods of decline, growth and decline have resulted from the behaviour of the GVA of the Finance sector coupled with essentially stable real term GVA for the non-finance sectors of the economy.

Figure 2.3: Annual percentage change of GVA (basic) in real terms
Figure 2.3 shows annual percentage changes of total GVA in real terms since 1999. 2013 represented the first occasion in six years that total GVA has not recorded a significant fall in real terms on an annual basis.

As Figure 2.4 shows, the reduction in GVA of the Finance sector observed in recent years can largely be attributed to the Banking sub-sector. In 2013 GVA in real terms for this sub-sector was less than half of that recorded in 2000. In the latest year (2013) GVA of the Banking sub-sector remained at a similar level to that seen in 2012.

Figure 2.4 GVA by Finance sub-sector in constant (2013) year values 1998-2013

* Other includes insurance companies and financial advisors

Further reading: Jersey Economic Trends 2014

In 2013, GVA in real terms of the Fund Management sub-sector was a third of that recorded in 2008. There has been some volatility in this sub-sector over the last thirteen years, with strong growth recorded from 2002 to 2008 followed by a period of decline from 2008 to 2013.

In contrast, the Accountancy and combined Trust & Company and Legal sub-sectors have seen GVA in real terms remain relatively stable over the last thirteen years. In 2012 these sub-sectors recorded the highest levels of GVA (in constant year values) since at least 1998. However in the most recent year (2013), both sub-sectors recorded declines of around 4%.
Gross Value Added per employee

Another way of assessing the contribution each sector makes to the overall economy is to look at GVA per employee. This is derived by dividing GVA by the number of full-time equivalent\(^3\) (FTE) employees. GVA per FTE is a measure of productivity showing the value of economic output produced per employee.

Figure 2.5  GVA per full-time equivalent employee in 2013 (current values)

Averaged over all sectors (excluding the rental component of ‘Other business activities’), GVA per employee in 2013 in current year values was £64,000 per FTE.

The mean GVA per FTE for the Finance sector was three times that of all other sectors; £130,000 per FTE for Finance compared with £43,000 for the other sectors.

The lowest values of GVA per employee were seen in the Hotels, restaurants and bars (£30,000 per FTE), Agriculture (£32,000 per FTE) and Wholesale and retail (£38,000 per FTE) sectors.

---

\(^3\) The number of full-time equivalent employees is calculated by assigning a full-time employee a weight of 1 and a part-time employee a weight of 0.5.

### Survey of Financial Institutions

The Statistics Unit runs an annual survey of financial institutions. This survey covers banks, trust and company administrators, fund managers and administrators, accountants and legal professionals.

In 2013, the total annual net profit (on which Jersey income tax is levied) of Jersey’s financial services sector was estimated to be £1,180 million. Total net profit in the banking sub-sector was £930 million, accounting for almost four-fifths of total net profit (Table 3.4).

### Table 3.4 Total net profit for all finance sectors and by sub-sector in 2013 (£ million and percent)

<td><strong>100</strong></td>
</tr>
</tbody>
</table>
Total net profit had previously peaked in 2008 at more than £1,500 million. Total net profit then fell in each of the two subsequent years, declining by almost three-fifths between 2008 and 2010; calendar year 2010 recorded the lowest level of total net profit since this survey was introduced in the mid-1990s. In contrast to the preceding two years, 2011 saw total net profit almost double on an annual basis, to almost £1.2 billion, a level at which it has since remained relatively unchanged.

It should be noted that the substantial increase in total net profit observed in 2011 can be attributed to a small number of companies reporting large transfers of income from non-resident units to resident parent companies based in Jersey.

**Figure 3.1** Total net profit for all sectors and banking sub-sector; 1998-2013

![Graph showing total net profit for all sectors and banking sub-sector](image)

Figure 3.2 shows net profits recorded by the Accountancy, Fund management and Trust & company administration (including Legal) sub-sectors.

Overall, the estimated net profit of the Trust & company administration (including Legal) sub-sector declined in 2013, down by 5% compared with that recorded in 2012.

In 2013 the Fund management sub-sector recorded an increase in net profit of more than a third (38%), to £34 million in 2013. This latest annual increase follows declines in net profit in each of the previous four years; between 2008 and 2012 the net profit of the Fund management sub-sector fell by 86%.

The net profit of the Accountancy sub-sector in 2013 was estimated at £28 million, an increase of 4% on an annual basis and representing the highest level of net profit recorded for this sub-sector since at least 1998.
In 2013, total expenditure by Jersey finance companies on goods and services was £710 million, representing a decrease of 5% compared with 2012. Of the total expenditure on goods and services, more than two fifths (44%) was spent in Jersey. The Banking sub-sector accounted for around half of this on-Island expenditure whilst Trust & company administration accounted for more than a quarter.

Figure 4.1 Number of staying leisure and total visitors, 1997-2014
4. Tourism

The number of registered bed spaces has fallen by more than two-fifths (43%) since 1998.

Figure 4.2 Number of registered bed spaces, 1998-2014

The average yearly room occupancy rate for 2014 was 63%, whilst the bed occupancy rate was 53%. Reflecting the seasonality of tourism in Jersey, the lowest occupancy rates occurred between January to March and November to December.

Figure 4.3 Number of bed nights available and number sold, 2014
Length of stay of staying leisure visitors

Between 1997 and 2014 the average number of nights spent in Jersey by leisure visitors has decreased by more than 1 night, from 5.7 to 4.2.

Figure 4.4 Average length of stay of staying leisure visitors, 1997-2014

Further reading: Jersey Tourism statistics and Annual Report 2014
In 2013, agricultural land occupied 55% of the Island’s area, an overall decrease of 284 hectares (1,575 vergées) since 2012. This decrease is mainly reflected by the reduction in the area of Jersey Royal potatoes of 287 hectares (1,595 vergées). However, other potatoes (including main crop) saw an increase of 176 hectares (977 vergées).

The main crop grown in Jersey, in terms of monetary value, is potatoes with a value of £27.5 million in 2013, a marginal increase of 2% on the previous year. Exports were down 171 tonnes to a total of 28,417 tonnes in 2013.

**Note:** Data on tomatoes not available for 2009 onwards
**Dairy industry**

In 2013, the total number of cattle increased by 0.8% compared with the previous year to 5,195 animals. The number of cows and heifers in milk fell from 2,931 in 2012 to 2,917 in 2013, a reduction of 0.5%. Milk production on dairy farms supplying Jersey Dairy rose for the first time in 3 years to 13.4 million litres for the milk year ending 31st March 2014, an increase of 761,000 litres or 6% compared to the milk year ending 31st March 2013.

The gross sales value of milk delivered to Jersey Dairy increased from £11.9 million (94.5 pence per litre, ppl) to £12.7 million (95.0 ppl) over the twelve months to 31st March 2014, a rise in total value of 6.5% and in sales value per litre of 0.5%.

*Numbers independently rounded to nearest 10*

Egg production from laying hens is the largest poultry activity in Jersey and saw an increase of more than a third (35%) in the number of laying hens in 2012 from 18,900 in 2011 to 25,400 in 2012. This increase was maintained in 2013 at 25,800.

Sheep numbers in Jersey have more than doubled from 550 in 2007 to 1,140 in 2013.

Further Reading: [Agricultural Statistics, 2013](#) (Economic Development Department)

**Fisheries**

Landings of both shellfish and wetfish have decreased in weight compared to 2012. Whilst some of this is due to changes in fishing effort and variation in stocks, the unusually severe weather at the end of 2013 also played a part (see Table 5.3).

6. Employment

The Jersey labour market
Total employment (headcount) in December 2014 was 57,250. The total reported headcount employment for Jersey’s private sector (including States Trading Committees\(^4\) and single-person enterprises) in December 2014 was 48,970. Headcount for the public sector\(^5\) overall, was 8,280 in December 2014.

For further reading and detailed analysis, refer to the Jersey Labour Market report for December 2014.

Historic data prior to December 2013 can be found in the Jersey Labour Market report for June 2013.

Employment by sector
In December 2014, over a fifth (22%) of all employees were employed in the Finance sector (12,770). Wholesale and retail trades (8,100) and the Public Sector (excluding States Trading Committees) each accounted for about one in seven (14%) of Jersey’s labour force. The private Education, health and other services sector employed 12% of workers (6,780).

Figure 6.1 Sectoral breakdown of employment (headcount), December 2014

Note: Transport, storage and communication includes former & current States Trading Committees.

\(^4\) Jersey Airport, Jersey Harbours, Jersey Post and Jersey Telecom (JT Global).

\(^5\) The figure for public sector employment includes core and zero-hours staff, Non States workers, the States of Jersey Development Company and the Parishes.
6. Employment

The levels of employment for December 2014 in the sub-sectors comprising the Island’s finance industry are shown in Table 6.1.

In December 2014, there were 6,460 private sector firms in Jersey. Of these around four-fifths (80%) employed 5 or fewer people. The greatest proportions of small businesses were in the other business activities sector (88%). The Finance and legal activities sector had the lowest proportion of small businesses (60%) and the greatest proportion of larger businesses (19% employing more than 20 people).

Unemployment

Jersey’s ILO unemployment rate\(^6\) in June 2014 was 4.6%, corresponding to approximately 2,800 people being unemployed and looking for work. In March 2011 the youth unemployment rate (for 16-24 year olds) was 14.3% in Jersey.

There is no legal requirement for unemployed residents of Jersey to register as actively seeking work (ASW) with the Social Security Department. The number of people registered as actively seeking work, therefore, should be regarded as an indicator rather than a measure of the actual level of unemployment in the Island.

On 31 December 2014, 1,440 people were registered with the Social Security Department as actively seeking work (ASW).

Figure 6.2 shows that the number of people registered as ASW in Jersey increased by around 600 between January 2009 and December 2014, from 840 to 1,440 respectively. The latest figure represents a fall of 610 from its peak of 2,050 in March 2013. In the latest twelve months (December 2013 to December 2014), the number of ASW fell by 310.

Further reading: Jersey Registered Actively Seeking Work, monthly report by the Statistics Unit.

---

\(^6\) The International Labour Organisation (ILO) definition of unemployment includes all adults (aged 16 and over) who are not working but are looking for or waiting to take up a job. Figures for Jersey are calculated from the 2011 Census and the Jersey Annual Social Survey.

Employment by place of birth and gender

In relative terms, employment levels in Jersey are high. In 2011, 82% of people of working age in Jersey were economically active (i.e. in work or looking for work).

As Table 6.4 shows, the lowest rate was for Jersey-born residents (75%) and highest for people born in Poland (94%). The economic activity rate for Jersey-born residents of working age was lower than the rates of those born in other jurisdictions predominantly as a result of the number of Jersey-born people in full-time education.

Work permits

Work permits allow employers to employ a person of non-European Economic Area nationality for a limited period, where it can be demonstrated that there is a shortage of particular qualifications and skills in the resident and permit-free European labour market. In 2014, 255 such permits were issued and 3 applications were refused.

Between 2004 and 2005, the number of work permit applications to work in Jersey fell by almost three-quarters. The fall occurred predominantly in the 'Hotel and Restaurants' and 'Agriculture' sectors and was largely a result of the entry of eight nations into the EU in May 2004, thereby removing the requirement of work permits for such nationals.

7. Prices and Earnings

Jersey (All-Items) Retail Prices Index, RPI
During the twelve months to December 2014, the All-Items Retail Prices Index (RPI) for Jersey increased by 1.3% to stand at 158.5 (June 2000 = 100).

The increase of the RPI over the twelve months to September was 1.9%; hence the annual rate of inflation decreased by 0.6 percentage points (pp) in the latest quarter. This decrease in the annual rate of inflation was due to several groups giving small downward contributions to the annual rate of increase of the RPI.

Two measures of underlying inflation for Jersey are published; RPI(X) which is the RPI excluding mortgage interest payments and RPI(Y) which is RPI excluding mortgage interest payments and indirect taxes such as GST and impôts.

For a detailed comparison of the Jersey, Guernsey and UK consumer price indices and price levels: see [Comparison of Consumer Prices in Jersey and the UK – June 2014](#).

The annual change in RPI(Y) was calculated for the first time for Jersey in December 2007.
Earnings
The Index of Average Earnings measures changes in gross wages and salaries paid to employees. It includes overtime payments, but excludes bonuses, employers’ insurance contributions, holiday pay and benefits in kind (e.g. free accommodation).

Figure 7.1 Annual change (%) in Average Earnings, 1991-2014

In June 2014 the average weekly earnings of workers in Jersey was 2.6% higher than in June 2013. The latest annual increase was 0.4 percentage points greater than that of the previous twelve-month period (2.2% to June 2013). The increase seen in June 2014 was greater than the preceding five-year average of 2.1% per annum; however it was below the long-term average of 4.5% per annum since 1990.

Figure 7.2 Annual percentage change in Average Earnings by sector, 2014

“Other business activities’ sector includes ‘Miscellaneous business activities’ and private sector ‘Education, health and other services’.

**‘Transport, storage and communication’ includes the States Trading Committees (Jersey Airport, Jersey Harbours and Coastguard, Jersey Post and Jersey Telecom).
As shown in Figure 7.2, the majority of industries in the private sector saw annual earnings increase by between 1 and 3 percent over the twelve months to June 2014. Over the twelve months to June 2014 average earnings in the public sector rose by 4.7%. The annual increase in public sector earnings was predominantly due to a scheduled pay award for the majority of public sector workers (4% in January 2014) as well as retrospective pay awards for some groups.

The survey from which earnings data is compiled is strictly designed to measure changes in earnings rather than the level. The earnings levels shown in Figure 7.3 should therefore be considered as reasonable approximations. Furthermore, it should be noted that average weekly earnings figures refer to full-time equivalent (FTE) employees; part-time workers would earn proportionately less corresponding to the numbers of hours worked.

The average weekly earnings of FTE employees in Jersey in June 2014 was £670. The Financial services sector had the highest average weekly earnings (£940 per FTE), whilst Hotels, Restaurants and bars had the lowest (£380 per FTE).

Figure 7.3 Average Weekly Earnings, per FTE, by sector, 2014, (£ per week)

- Financial services: £940
- Public sector: £900
- Electricity, gas & water: £820
- Transport, storage & communications**: £750
- Construction: £650
- Manufacturing: £600
- Other business activities*: £550
- Wholesale & retail: £480
- Agriculture: £470
- Hotels, restaurants & bars: £380
- All Sectors: £670

* The “Other business activities” sector includes “Miscellaneous business activities” and private sector “Education, health and other services”.
** Transport, storage and communication includes the former and current States Trading Committees. Finance services: excludes bonuses; the Survey of Financial Institutions estimated the average weekly bonus per FTE was £110 in 2013.
7. Prices and Earnings

The Jersey Income Distribution Survey (IDS), which was carried out over the twelve month period from May 2009 to May 2010, collected the necessary household and individual income information required to determine median income from earnings. The results derived from the IDS data have been up-rated from the survey period to June 2014 using the Jersey Index of Average Earnings.

The estimated median earnings in June 2014 was £550 per week per FTE.

**Comparison with Retail Price Indices**

During the twelve months to June 2014 the Jersey All Items Retail Prices Index (RPI) rose by 1.6%.

Average earnings increased by 2.6% during the last twelve months, implying that earnings increased by 1 percentage point more than prices over the period.

Figure 7.4 illustrates the difference between the annual change in average earnings and the annual change in the RPI for each year from 1991 to 2014. Earnings have increased in Jersey at a lower rate than earnings in seven out of the last 24 years (shown as negative values in Figure 7.4).

**Figure 7.4 Difference between annual changes in average earnings and the RPI, 1991 to 2014 (percentage points)**

Between 1991 and 2003 the growth of earnings in Jersey was greater than that of retail prices; the higher earnings growth was particularly prominent in 1999 and 2001 when earnings increased by around 4 percentage points more than prices.

More recent years have constituted a different period in the relative behaviour of earnings and retail prices compared to that seen prior to 2003. Earnings have risen by less than prices in three out of the last five years; however, the latest increase is the second consecutive twelve-month period in which earnings have risen at a greater rate than prices.
The long-term growth of earnings in Jersey, historically, has increased at a faster rate than retail prices.

Figure 7.5 shows that over the longer-term (since 1990) earnings have risen more than prices. This is reflected in the long-term annual averages, with earnings rising by an average of 4.5% per annum since 1990 compared with 3.7% per annum for prices.

Further reading: Index of Average Earnings Index and Jersey Economic Trends, Statistics Unit. Further reading: Jersey Income Distribution Survey, Statistics Unit.

Comparison of Jersey and UK consumer price levels

In 2013, price levels for consumer goods and services (excluding housing costs, health and education) in Jersey were 9% greater than the UK average. Consumer price levels were marginally greater in Jersey than in London (by 2%). When housing, health and education costs are taken into account, the overall estimated relative price level for goods and services in Jersey was 20% greater than the UK average.

Figure 7.6 presents the percentage differences in price levels between Jersey and the UK average for nine expenditure categories.

Further reading: Jersey-UK Relative Consumer Price Levels for Goods and Services 2013, Statistics Unit.
8. States of Jersey Income and Expenditure

In 2013, the States ended the year with a £0.5 million financial surplus. The surplus of £0.5 million compared with a projected surplus of £20 million in the 2013 Annual Budget. Income ended the year £9 million below projections and States expenditure was £10 million higher than Budget.

2013 was the final year of a three year financial plan to return to balanced budgets.

Figures as at 31st December of each year

In terms of States expenditure, of every £1 the States spent in 2014 about 28p was spent on Health, 16p on Education and 26p on Social Security.

Figure 8.3 Where each pound of States of Jersey money will be spent in 2014

*Housing provided a net return of £12.6 million and were incorporated on 1st July 2014.*

**Overseas aid**

In 2014, the official contribution of overseas aid from Jersey was £9.8 million, of which more than £7.7 million was grant aid and just over £1.6 million was disaster and emergency aid. The official aid contribution from Jersey in 2014 was 5% greater than the £9.3 million in 2013.

Figure 8.4 Official aid contribution from Jersey, 2014

In 2013, Jersey’s Overseas Aid expenditure was 0.3% of total Gross Domestic Product.

Further reading: [Overseas Aid Commission annual reports](#).
In 2013, income tax receipts of £452 million were below the forecast set in the 2013 budget by £3 million. This was primarily due to a £20 million underachievement in personal tax, an £18 million overachievement in business tax and an increase in bad debt provisions of £1.9 million.

**Goods and Services Tax (GST)**

The States agreed in July 2005 to introduce a 3% broad-based Goods and Services Tax in May 2008.

The standard rate of GST was increased from 3% to 5% effective June 2011. The full year effect on GST receipts at the new rate of 5% is first seen in 2012. The slight fall in GST in 2013 is as a result of an increase in bad debt provisions and lower receipts from several sectors reflecting reduced activity due to the economic downturn.

**Figure 9.3 Goods and services tax receipts, 2009 - 2013**

The strategic reserve
The Strategic Reserve is a capital safeguard against unforeseen events and economic downturn.

The Stabilisation Fund

In December 2006 the States agreed to establish a Stabilisation Fund for the purpose of providing protection from adverse impact of economic cycles, aiming to create a more stable environment with low inflation. The intention is that money will be paid into the Fund when the economy is growing strongly and drawn out from the Fund to support the economy when it is performing more weakly.

The Fund was used to provide £44 million for the Economic Stimulus Package agreed by the States in 2009. A transfer of £68 million was made in 2010 to support the Consolidated Fund and a further transfer of £46 million was made during 2011 as agreed in the 2011 Budget.
Figure 9.5 Market value of stabilisation fund, 2006-2013

Figures are £ millions and stated at market value at 31 December each year.

Impôt duty receipts in 2014 were £54.1 million, a similar figure to that seen in 2012 and 2013.

Figure 10.1 Customs and Excise Impôt duty collected, 2000-2014

In 2014 impôt duties on road fuel raised £20.7 million (38% of the total); tobacco duty raised £13.8 million (25% of the total).

Figure 10.2 Customs and Excise Impôt, sources of revenue, 2014

(Revenue in £ million)

Numbers have been rounded independently so may not sum to total

The revenue raised from road fuel has increased by around 12% over the past 10 years from £18.5 million in 2005 to £20.7 million in 2014.
Revenue from tobacco duty has also increased, from £12.5 million to £13.8 million over the same period, an increase of 10%. Over the same period, the quantity of tobacco imported has fallen from 69,000 kgs in 2005 to 42,000 kgs in 2014, a reduction of approximately 39%.

Figure 10.3 Impôts duty receipts, 2000-2014

![Graph showing Impôts duty receipts, 2000-2014](image)

Note: VRD = Vehicle Registration Duty, introduced in 2003 and abolished in May 2008. VED = Vehicle Emissions Duty, introduced September 2010

In 2014 beer imports were down by 22% on 2005 levels, while the quantity of spirits (litres of alcohol) decreased by 25% over the same period. The quantity of wine imported has remained similar over the last decade, whereas the quantity of dutiable cider has increased by 25%.

Migration

Migration into and out of the Island consists of a dynamic ‘ebb and flow’ of migrants in both directions. The net migration in a given calendar year is therefore the difference between those migrants arriving and those leaving.

Figure 11.2 Net migration, 2001 to 2011 by place of birth

As can be seen from Figure 11.2, people born in countries which had recently joined the European Union were one of the largest contributors to the total net inward migration between 2001 and 2011. People born in Poland accounted for 3,100 of the total net migration from such countries.

Population structure

In 2011, around two-thirds (66%) of the total resident population were of working age (women/men aged 16-59/64 years), about a sixth (18%) were above working age and another sixth (17%) below working age. These proportions have been substantially constant since 1981, although the absolute numbers in each category have increased.
11. Population

Figure 11.3 Age structure with respect to working age, 1971-2011

Note: school leaving age increased in 1992 from 15 to 16 years of age.

On Census Day in March 2011, over four-fifths of the resident population of Jersey possessed housing qualifications within the ‘a-h’ category as defined under Housing Regulations. Around one in eight (13%) people in Jersey were non-locally qualified.

Population density
The population density of Jersey is approximately double that of England and about a quarter less than Guernsey. Figure 11.4 shows the pattern of population density across the Island.

Figure 11.4 Population density in Jersey by Parish, (Census 2011)

Place of birth
At the time of the 2011 Census, half (50%) of the population were born in Jersey and almost a third of people (31%) were born elsewhere in the British Isles.

Figure 11.5 Population by place of birth, 2011

The Jersey Annual Social Survey (introduced in 2005), together with the Censuses, have shown how the origin of migrants to the Island has changed. Throughout the 1970s, 1980s and 1990s between half and two-thirds of ‘Other Europeans’ arriving in Jersey were from Portugal/Madeira. A significant change has occurred in recent years with the proportion arriving from Portugal/Madeira falling, whilst that from Poland has increased (see Figure 11.6).

</tbody>
</table>

Note: Percentages independently rounded to nearest integer

The proportion of adults who are married has been declining over the last several decades, whilst the proportion divorced (and not re-married) has increased from 21 per 1,000 in 1971 to 101 per 1,000 population in 2011.

12. Households

Dwellings
The 2011 Jersey census identified 44,698 private dwellings\(^7\) and 157 communal establishments. Around one in fourteen (7\%) of all private dwellings were vacant on census day – a total of 3,103 dwellings. St Helier had the highest number of vacant dwellings (1,397), whilst St Peter had the highest proportion of vacant dwellings, with a vacant rate of 9\%.

Private households
The number of private households in Jersey recorded in the 2011 Census was 41,595.

More than half of households in Jersey are owner-occupied, a third are privately rented (qualified or non-qualified) and around one in seven households are accommodated in social housing.

</table>

\(^7\) Private dwellings as measured by the census are not necessarily separate physical dwellings; in the census separate dwellings were identified where the occupants shared a living space and a cooking area and may not necessarily correspond to a dwelling with a separate entrance.
12. Households

**Number of persons per household**

The average number of people per private household declined between the 1971 and 2011 Censuses\(^8\). The declining trend in household size is apparent in Table 12.2.

**Table 12.2 Average number of persons per household, 1971-2011**

**Property type**

In terms of the types of occupied property in Jersey, more than two-fifths (44%) are flat/maisonettes, whilst a quarter (26%) are detached houses and a further third (30%) are semi-detached or terraced houses (Table 12.3).

Over four-fifths (82%) of dwellings have one, two or three bedrooms. The majority of rental accommodation has either one or two bedrooms with nearly two-thirds (62%) of non-qualified accommodation having one bedroom. In contrast, almost seven out of ten (69%) owner-occupier households have three or more bedrooms.

The 2011 census found that 44% of ‘single parent with dependent children’ households were living in States, housing trust or parish rental accommodation. Over a quarter (28%) were living in owner-occupied accommodation. In contrast, over four-fifths (82%) of households with two or more pensioners lived in owner-occupied accommodation.

---

\(^8\) The total number of private households and the average number of persons per household are not strictly comparable to earlier censuses because households living as independent units in lodging houses and staff accommodation were treated as private households for the first time in 2001; there were 1,801 such households recorded by the 2001 Census.
House prices
The average price of dwellings is calculated by weighting together the average price for each of the following five categories: 1- and 2-bedroom flats; 2-, 3- and 4-bedroom houses (“houses” includes houses and bungalows). The resulting mix-adjusted average dwelling price is converted into the Jersey House Price Index (based to 100 for calendar year 2002). The index includes share transfer properties and is seasonally adjusted.

In order that the average price in a given period is independent of the particular “mix” of properties sold in that period, a “mix-adjusted” average is calculated for each period by weighting each property type by a constant proportion.

Figure 13.1 Annual percentage change in the Jersey House Price Index, 1986-2014

Figure 13.1 shows the overall property price changes in Jersey on a calendar year basis from 1986 to 2014. The increase in the Jersey House Price Index recorded in 2014 (up by 3% compared with 2013) represents the first annual increase in the overall average property price for five years, since 2009.

As is apparent from Figure 13.1, property prices in Jersey have seen three periods of strong growth during the last three decades, with peaks in the annual rate of increase occurring in 1989, 1998 and 2008. Each of these years recorded annual price increases of more than 20%. In the past, such peaks were followed by periods of lower rates of increase or, more recently from 2010 to 2013, by a period of sustained decline in overall average price on an annual basis.
Almost all property types recorded increases in mean price in calendar year 2014 compared with 2013; the exception was 1-bedroom flats, which were essentially stable in price on an annual basis.

Mean prices for specific property types from 2006-2014 are shown in Table 13.1.

Prices are rounded to the nearest £1,000.

**Median house prices**

The overall mix-adjusted Jersey House Price Index is calculated from the mean prices of each type and size of property. Examining changes in the median price of dwellings provides a complementary insight into the behaviour of residential property prices.

Over the last 3 years, from 2012 to 2014 the difference between the mean and median prices of 2-bedroom houses has increased, from being essentially at the same level in 2012 to about £30,000 in 2014. The difference between the mean and median prices of 3- and 4-bedroom houses has generally been around £30,000 for this same period.

Table 13.2 shows median property prices of 2-, 3- and 4-bedroom houses on an annual basis from 2006-2014.

**Jersey Housing Affordability Index**

The Jersey Housing Affordability Index (JHAI) is the headline indicator of whether a working household with average (mean) income is able to purchase a median priced property affordably.

In 2013 Jersey housing affordability worsened marginally compared to 2011 and 2012 due to increases in the overall median dwelling price and mean mortgage interest rate.

Between 2002 and 2012, a working household with mean net income was not able to service a mortgage affordably on the purchase price of a median priced house of any size. However in 2013 a working household with average income was able to service a mortgage affordably on the purchase price of a median price 2-bedroom house for the first time since at least 2002.

The mean price of 1-bedroom flats was around 3 times the mean gross household income, whilst for 2-bedroom flats this ratio was less than 5. The ratio of mean price to mean gross household income was below 6 for 2-bedroom houses, greater than 7 for 3-bedroom houses and around 10 for 4-bedroom houses.

In 2013, almost half of all working households could not service a mortgage affordably on the purchase price of a property at the lower quartile price, a greater proportion than in 2011 and 2012.
The level of income required to service mortgage payments on a median priced dwelling affordably was 2.2 times the mean individual earnings of a FTE employee.

Overall housing affordability worsened slightly in 2013 by all measures. This decline in affordability was largely attributed to the increase in average flat prices and was seen in spite of the affordability of 2- and 3-bedroom houses improving.

Figure 13.2 The Jersey Housing Affordability Index, median dwelling price (3-bedroom houses) and mean mortgage interest rates, 2002-2013

Further reading: The Jersey Housing Affordability Index, States of Jersey Statistics Unit

**House prices, retail prices and earnings**

A comparison between the Jersey Retail Prices Index, the Index of Average Earnings and the House Price Index is shown in Figure 13.3. Since 1997, house prices in Jersey have seen a greater overall increase than earnings and retail prices.

Figure 13.3 Retail Prices, Average Earnings and House Price Indices (1990=100)
14. Education

Highest educational qualification attained
The 2011 Census asked adults aged 16 or over to provide information on all educational qualifications attained. Table 14.1 shows a comparison with the 2001 Census.

Number of pupils

Figure 14.1 Number of pupils in Primary and Secondary Education, 2005-2014

Figures are for September of each year.
Attainment at GCSE

Figure 14.2 Percentage of pupils attaining 5 or more GCSE and equivalent qualifications at grade A* to C in Jersey and England; academic year 2013/2014

Participation at A level or equivalent (also known as ‘level 3 qualifications’)
In 2013/2014, a total of 568 pupils in Jersey entered at least one substantial level 3 qualification. This indicates that 56 per cent of the potential cohort of children who could have continued their education entered at least one level 3 qualification after completing Key Stage 4. Participation was higher for females (62.7%) than males (49.9%).

Figure 14.3 Percentage of all A level entries in English, Mathematics and Science subjects in Jersey, by gender; academic year 2013/2014
**Attainment at A level**

The average point score per A level entry in Jersey in 2013/14 was 224.3 (equivalent to a C+ grade), higher than that for England (215.5).

The average score per A level entry in Jersey was higher for females (228.1) than that for males (220.3).

15. Culture and Heritage

The Department for Education, Sport and Culture (ESC) funds four independent organisations (by direct grant) which provide core arts and heritage services for the Island. In addition, the department provides funding to L’Office du Jèrriais for the teaching of Jersey Studies and Jèrriais in schools, and the promotion of the language in the community; including classes for adults.

Jersey Heritage Trust

Established by the States of Jersey to care for, promote access to, and act as advocates for the Island’s public heritage resources, Jersey Heritage is responsible for a number of sites and services for the Island. Under agreements with the States, the National Trust for Jersey and the Société Jersiaise, it administers sites including the Jersey Museum, the Maritime Museum, the Jersey Archive, Elizabeth Castle, Mont Orgueil Castle, Hamptonne and La Hougue Bie.

In 2013 there were a total of 182,498 visits to sites administered by Jersey Heritage.

Jersey Heritage also runs the “Forts and Towers” programme which gives public access to a number of historic buildings for short-term hire (3,755 staying visitors in 2014). Other work includes providing advice to the Planning and Environment Department on the listing of historic buildings. Jersey Heritage also provides a grant to the Société Jersiaise to support public-facing aspects of its work including the Lord Coutanche Library and the Photographic Archive.

Further reading: Jersey Heritage annual reports

Arts

In addition to administering the Gloucester Hall as part of the Fort Regent complex, ESC supports two arts venues: the Opera House and the Jersey Arts Centre with main auditoria seating 625 and 250, respectively. In addition, the Opera House stages smaller performances in its studio space and the Arts Centre holds some performances in occasional venues in the Island; it also presents a programme of exhibitions in the Berni Gallery at Phillips Street.
The Arts Centre held 263 ticketed performances (including 25 theatre-in-education performances in Primary schools) which were attended by 30,888 people (not including schools audiences at Channel Islands Music Council concerts). There were 16 exhibitions in the Berni Gallery and a programme of courses and workshops.

The Opera House held 313 performances in the main auditorium and 47 in the studio space with total audiences of 75,590. In addition, 276 classes were held in the studio space (5,524 participants). 4,280 individuals took part in the Jersey Eisteddfod.

The Jersey Arts Trust is the arts development and grant-giving body in Jersey. The Trust ran six arts development projects last year in which more than 600 people participated; it ran, or supported, six arts development groups with more than 100 participants. A total of £46,160 was awarded as grants (including underwriting which, though awarded, was not necessarily called upon). The Trust also distributed £7,500 in arts grants in its capacity as a registered entity on behalf of the One Foundation.

Jèrriais

Last year approximately 775 children received the introductory six-week Jersey Studies course in Year Four with 69 participants in the after-school (Pallions) classes at four primary schools: St Peter, St Lawrence, First Tower and Grouville. (Some of this work continues during the second and third terms of the academic year in 2015).

There were 19 students in classes for secondary students and 31 in adult classes at beginner, intermediate and advanced (conversation) levels.

The work of L’Office du Jèrriais also included: promotion of Jèrriais in the community; translation for States Departments, local businesses and voluntary organisations; participation in community activities including the Jersey Eisteddfod; and development of teaching resources.

Further information: www.jerriais.org.je

Jersey Library

In 2014 the Jersey Library received a total of around 455,700 visits, of which 350,300 were to the main Town Library and 70,800 were to the part-time branch in Les Quennevais School. The mobile library visits more than 30 sites each week, and received about 8,000 visits in 2014. The Library’s online catalogue received 27,000 visits in 2014 and 5,000 digital loans were made in the form of ebooks and digital magazines.

Library expenditure equated to about £16 per capita in 2014 and expenditure on books and materials was £2 per capita.

</tbody>
</table>

*Numbers independently rounded to nearest 10*

In 2014 the library dealt with about 68,600 enquiries; 59,700 at the Town Library and 8,900 at the Branch Library. Around 1,000 online family history research sessions took place in the Town Library’s Open Learning Centre, alongside 1,000 European Driving License sessions.

### Figure 15.1 Loans by category, 2014

During the year, there were 284 children’s activities and organised group visits to the library, attended by over 5,000 young people. A further 108 visits were made by library staff to schools and community groups to promote the library service, books and the joy of reading. The Library’s Summer Reading Challenge for children broke all previous records, with 2,219 children taking part.

573 visits were made to residential homes and the housebound to deliver books and other resources.
16. Health

General health status
One way to determine the overall health of a population is by asking people to self-rate their health. The 2014 round of the Jersey Annual Social Survey recorded that nearly nine out of ten adults rated their health as ‘good’, ‘very good’, or ‘excellent’. Figure 16.1 shows the proportion over recent years. Fewer than one in twenty (3%) reported being in ‘poor’ general health in 2014, a proportion unchanged since 2007.

Figure 16.1 In general, how would you rate your health?
Proportion of adults who responded ‘good’, ‘very good’ or ‘excellent’

Births and deaths
In 2014, 989 live births and 682 deaths were recorded in Jersey, a net natural growth of 307.

Figure 16.2 Number of births, deaths and natural growth in population, 1990-2014

Source: States of Jersey Superintendent Registrar.
Annual reports are published on the States Assembly website
Teenage pregnancy
The rate of under 18 (teenage) conceptions in Jersey over the period 2011-2013 was 9.6 per 1,000 15-17 year olds (based on 48 conceptions). This rate is significantly lower than the England average of 27.6 per 1,000 over the same period. Around two-thirds (64%) of teenage conceptions in Jersey ended in a termination.

Average age at death
The mean average age at death in Jersey has been increasing for both males and females over the past 50 years. The average age at death for women is now about seven years higher than for men.

Figure 16.3 Average age at death, 1955-2009

In 2013, the average age of women dying was 79, whilst that for men was 74.

Main causes of death
In 2013, cancer was the main cause of death, responsible for around one in three (30%) of all deaths. Circulatory diseases, which include ischaemic heart disease and stroke, accounted for another 28% of deaths. Respiratory diseases, such as influenza, pneumonia and chronic lower respiratory disease, were the underlying causes of one in eight (12%) deaths.

Avoidable death
On average, around 120 male deaths each year are considered avoidable (either preventable through public health interventions or amenable to healthcare). The comparable figure for females is around 70 avoidable deaths per year.

Life expectancy at birth
Life expectancy at birth in 2013 was 80 years for males and 85 years for females.
Primary care
On 31st December 2014 there were 13 GP practices in Jersey, with a number of satellite surgeries, and 100 practicing GPs.

Smoking
In Jersey, almost one in six (14%) adults smoke daily, smoking an average of 13 cigarettes per day, whilst nearly half of Islanders (48%) have never smoked.

In 2014, one in twenty (4%) adults had used ‘e-cigarettes’ at least once a month. Fewer than one in twenty (4%) had never heard of ‘e-cigarettes’, and an additional four-fifths (83%) had heard of them but never used them.

Alcohol
Nearly a fifth (18%) of adults reported drinking alcohol 4 or more times a week. An additional 29% drank alcohol 2-3 times a week.

Figure 16.4 How often do you have a drink containing alcohol?

17. Crime & policing

Levels of recorded crime

There were 3,121 crimes recorded in Jersey in 2014. This figure is a 2% reduction on the total in 2013 and represents 31.5 crimes per 1,000 population. Most crime occurred in St. Helier and in 2014 eight of the Island’s parishes recorded fewer than two crimes per week on average. More than a third (37%) of recorded crime resulted in offenders being charged for court appearance or reported to Parish Hall enquiries.

Figure 17.1 Recorded crime in Jersey 2011-2014

In 2014, there were 47 serious or fatal Road Traffic Collisions (RTCs) compared to 61 in 2013. Nearly three-quarters of the injuries received were fractures; nine people sustained very serious or fatal injuries (see Figure 17.2).

Figure 17.2 Number of serious injury or fatal RTCs in Jersey 2013 and 2014

Source: States of Jersey Police Service.
Drugs
In 2014 the Customs and Immigration Service was responsible for 244 drug seizures with an estimated total street value of almost £1 million.

Figure 17.3 Seizures by the Customs and Immigration Service, including Joint Operations: annual number and estimated total street value, 1999-2014

Data for 2001 onwards includes joint operations between Jersey Customs, Guernsey Border Agency, Jersey and UK police and French Customs.

Joint operations, initiated by Jersey but made by UK and French authorities, resulted in drug seizures valuing £0.5 million being made outside of the Island in 2014.
The prison population in Jersey increased between 2003 and 2011, with 2011 seeing an average of 185 prisoners. However, the average prison population has since decreased to 140 in 2014, the lowest level for more than ten years.

The number of temporary releases increased slightly in 2014, as did the number of work experience releases. The number of breaches remained at the lowest level seen for at least 10 years (Table 17.2).

18. Fire Service

There were 1,267 fire and non-fire emergency responses in 2014, an increase compared to 2013, and continuing the trend seen in recent years. Activity levels were up on the 2013 outcomes in all major areas although still lower than in previous decades. In 2014 the Service tackled 62 fires in people’s homes, rescuing 11 people from those situations. The Service dealt with 48 fires in other buildings and rescued 69 people from non-fire emergency situations.

Figure 18.1 Response activity, 2014

*Special services are those emergencies which are not fires i.e. Hazardous Material incidents, Height rescues, Emergency Effect Entry and Industrial accidents.*

Figure 18.2 Prevention activity, 2014
The Service’s Prevention team aims to bring about lower levels of fire and associated harm and loss through helping people to understand and manage risk. The majority of information is delivered through media channels.

The activity represented in Figure 18.2 is the delivery of information on a face to face basis.

The Service’s Protection team enforce fire safety and petroleum laws and regulations on behalf of the Minister for Home Affairs. It also provides enforcement support and technical advice on licensing, pyrotechnics and planning and building matters. Changes to fire precautions legislation have resulted in an increase in the number of fire certificates issued or amended but a reduction in the number of inspections carried out to ensure compliance.

19. Ambulance Service

The Ambulance Service has 7 emergency ambulances, 3 single response cars, two major incident vehicles and one 4WD with major incident trailer. In addition to the emergency response vehicles, the Service also operates a Patient Transport Service (PTS), which has 12 mini-buses and 4 hospital car service vehicles. Between the hours of 7 a.m. and 10 p.m. three ambulances are available and between 10 p.m. and 7 a.m. there are two available.

Calls
The Jersey Ambulance Service received 8,289 emergency calls in 2014, an increase of 202 calls from 2013 (8,087 calls), and representing an average of 23 emergency calls per day.

Table 19.1 Ambulance service call statistics, 2009 - 2014

</table>

*Emergency calls refers to all 999 calls.*

Urgent calls come from GPs (not 999) and totalled 1,220 in 2014, an average of about 3 per day. Routine calls are for transfer of patients of which there were 1,564 calls in 2014.

Response rates
It is the aim of the Ambulance Service to respond to all Category A calls within 8 minutes, which can often be difficult in the outlying areas of the Island. The target for Category B and C is to be reached within 19 minutes.
2014 saw largely the same rates of targets being reached as in 2013. Life-threatening situations (Category A) were reached within the 8 minute target more than two-thirds (68%) of the time. The response rate for Category A in the West of the Island was 31% in 2014, compared to 26% in 2013. Category B and C achieved similar rates in 2014 as in 2013, 96% and 80% for Category B and C, respectively, in 2014.

Figure 19.1 Percentage of calls responded to within target, 2008 - 2014

Care rating (Source: JASS 2010)
Almost two-thirds (63%) of people who had received care from the Ambulance Service (including PTS) in the previous twelve months rated the care as “Excellent”; a further quarter (28%) rated it “Very good”.

Community alarms
The elderly and infirm living at home in Jersey can be supplied with a Community Alarm System to which the Ambulance Service respond when activated if it is a genuine emergency (otherwise key holders are contacted to attend as a first response). In 2014, the ambulance responded to 382 such alarms; neighbours/contacts were notified in another 63 cases and GPs were called in 66 cases. The total number of alarm activations in 2014 was 3,842.

Automated external defibrillators
In 2014 there were a total of 168 defibrillators in the community.
20. Coastguard

Jersey Coastguard provides the response, initiation, co-ordination and international management service for maritime and aviation Search and Rescue (SAR) within Jersey’s territorial waters. This service is obligatory under the IMO’s 1979 International Convention on Maritime Search and Rescue, to which Jersey is a signatory, through the UK. The team also coordinates pilotage and shipping movements for the Ports of Jersey, runs the VTS (Vessel Traffic Services) for the ports and undertakes operational liaison with the Shipping Companies which serve Jersey. The Coastguard manages the counter pollution and salvage response for the Island under the Shipping (Jersey) Law 2002 and maintains the voyage safety reporting service for all vessels on passage in territorial waters, with 4,562 reports being received and processed in 2014. The Coastguard also assists the Fire and Rescue Service, Ambulance Service and Police to respond to incidents where persons are at risk of injury or death on the Island’s cliffs or the shoreline.

Search and Rescue Incidents (SAR)

In 2014 there were a total of 140 incidents that required the use of Coastguard SAR Service (see Table 20.1). The service assisted a total of 107 people during the year, and saved a further 28 from imminent danger. 20 “alarms with good intent” were raised by members of the public to a potential problem at sea; each of these were investigated either from ashore or by an SAR unit. There were 59 vessels that needed assistance during 2014 and a further 11 needed saving from imminent danger and 1 commercial fishing vessel sank. The most common reasons for incidents occurring at sea were mechanical/cooling failure or due to fuel or oil problems.

During the year, close cooperation with the States of Jersey Police resulted in 5 coast line searches being carried out for missing persons, including the use of the Channel Islands Air Search (CIAS) aircraft. Major incidents that the Maritime Rescue Coordination Centre (MRCC) coordinated included a fire aboard a large commercial fishing vessel, and the rescue of two fishermen following the rapid sinking of their vessel off Jersey’s south coast in March.

Coastguard vessels

As well as helping with SAR operations and assisting the other emergency services, the fleet also operates a 24 hour pilot boat service to assist vessels to safely dock in port and to clear local reefs and navigational dangers. The fleet, including the Duke of Normandy, also conducts maintenance and inspection of aids to navigation (lighthouses, buoys and beacons), harbour and offshore reef structures. Additionally, if required, the fleet also carries out salvage operations, oil pollution response, offshore towage and other contract work in the Channel Islands area.

Beach Lifeguard Service

The seasonal Beach Lifeguard Service is run by the RNLI. The RNLI works closely with Jersey Coastguard and provides 10:00-18:00 cover for four beaches from the start of April to the end of September each year.

21. Social Security

Social Security Fund
The Social Security scheme is the means by which workers insure themselves, through the payment of contributions, for periods when they are unable to work through ill-health, maternity or retirement.

For low to medium wage earners, supplementation is used to top-up the contributions to ensure a full pension and full insurance if unable to work.

In 2013, expenditure on benefits from the Social Security Fund totalled £201.7 million. Income from Contributions and States Grant totalled £219.3 million.

Over 29,000 people received an Old Age Pension in 2013, whilst almost 900 mothers claimed a Maternity Allowance.

Table 21.1  Number of individuals claiming benefit on 31st December 2013

</tr>
</tbody>
</table>

Health Insurance Fund
The Health Insurance Fund subsidises GP visits and prescriptions for most Jersey residents (the “Health Scheme”). A total of £27.2 million was spent on benefits from the Health Fund in 2013.
Tax funded benefits
Income Support provides financial assistance towards the cost of housing, living, medical needs and childcare.

On the 31st December 2013 there were 6,552 Income Support claims being paid.

There are several other tax funded benefits including Christmas Bonus benefit, TV Licence Benefit and the Jersey 65+ Health Scheme. In 2013 almost 19,000 people each received a Christmas Bonus payment.

Health and Safety Inspectorate
The Health and Safety Inspectorate is the regulatory authority of health and safety at work in the Island.

In 2013, the number of work related accidents and incidents reported through claims made for social security benefit reduced by 157 to 621, and the number of working days lost decreased by 3,105 to 16,827. A total of £452,000 was paid out in Short Term Incapacity Allowance as a result of these claims.

The Inspectorate carried out 88 investigations into serious accidents and incidents and 114 proactive inspections of high risk workplaces during the year. In 2013, 3 companies
were prosecuted in the Royal Court for health and safety offences arising from serious accidents and 33 enforcement notices served by inspectors.

22. Sea and Air Transport

Total number of passengers, by route
The total number of passenger (air and sea) arrivals in 2014 was around 1,134,000, some 43,000 more than in 2013, an increase of 4%. Sea arrivals were up by 6%, while air arrivals were up by 3% compared with 2013.

Figure 22.1 Total number of sea and air passenger arrivals, 2002-2014

Numbers are in thousands of arrivals only. Passengers by air exclude transit passengers.
Source: Jersey Tourism Annual Report 2014

Sea transport
In 2014 the total number of sea passengers (arrivals and departures) for all routes was over 786,000, around 45,000 more than in 2013. Cruise ship passengers are also included in Figure 22.2 – there were approximately 7,500 such passengers in 2014.

Figure 22.2 Total number of sea passengers, by route, 2002-2014

Source: Jersey Harbours Department.
Notes: Breakdown figures for 2002 and 2003 are considered less accurate than 2004 onwards, although the total number of passengers are regarded as reliable. The passenger figures shown are for regular scheduled routes in and out of the Island.
Sea freight

More than 361,000 tonnes of freight were shipped (exports and imports combined) through St Helier harbour in 2014.

Source: Jersey Harbours Department.

Along with freight, Jersey harbour saw 103,134 tonnes of fuel pass through the port; around half of the fuel total was diesel and petrol (27% and 22% respectively). Heavy fuel oil and aviation fuel each accounted for 17% of the total whilst kerosene and propane accounted for 12% and 6% respectively.
22. Sea and Air Transport

**Airport traffic**
The total number of air passenger arrivals in 2014 was 740,841, an increase of 3% on 2013.

Total UK passenger arrivals increased by 4% on the previous year, while Channel Island arrivals decreased by 8%. International arrivals were up 4%.

23. Vehicle Transport

Number of vehicles
The number of vehicles recorded on the Driver and Vehicle Standards (DVS) register surpassed 100,000 for the first time in 2005 and stood at 121,551 on 31st December 2014.

The 2014 figure represents a net increase of 922 vehicles on 2013. The increase comprises the difference between new registrations (6,544), scrapped (2,775) and exported (2,867) vehicles.

Many vehicles may lie unused or have been disposed of without informing DVS. Such vehicle records remain on the register, resulting in a higher number of registered vehicles than actual vehicles on Jersey’s roads.

In 2014, 76 hybrid vehicles were registered; an increase on those registered in 2013 (56). 32 electric vehicles were registered, an increase compared to 2013 (20).

As recorded by the 2011 Census, the average number of cars/vans per private household was 1.50. This number was at a similar level to that recorded in 2001 (1.48) and higher than that for the UK9 (1.2). The average number of motorcycles/scooters per household increased from 0.12 to 0.19 per household between 2001 and 2011.

Figure 23.1 Total number of vehicles registered in Jersey, 1980-2014

Figures include all cars, tractors, motorbikes etc, and commercial and private vehicles. Figures up to 1993 include only taxed vehicles; figures from 1994 onwards include all vehicles recorded on the DVS register as at 31st December of each year.

9 Derived from data published in the General Lifestyle Survey 2010; Office for National Statistics.
In 2014, 2,792 people (1,585 males and 1,207 females) took a practical driving test.

A higher proportion of males passed than females, with 1,207 males (76%) and 778 females (64%) passing. In total 807 people failed. Of the total practical driving tests, 2,075 (74%) were taken in a car. Powered two wheeler tests rose by 7% compared to 2013 and accounted for 540 (19%) of tests.

Table 23.1 Practical driving test results by gender, 2014

<table>
<thead>
<tr>
<th></th>
<th>Male</th>
<th>Female</th>

<td>778</td>
<td>1,985</td>
</tr>
<tr>
<td>Fail</td>
<td>378</td>
<td>429</td>
<td>807</td>
</tr>
</tbody>
</table>

The number of driving tests taken in 2014 was the lowest since 2006.

Some 4,716 people booked a theory driving test in 2014, but around one in 12 (375) failed to attend. Of those who did attend, 1,934 passed, representing a pass-rate of 44%.

Source: Driver and Vehicle Standards Department.
Households without access to a car or van
The 2011 Census found that one in six (16%) private households did not own or have access to a car or van, a figure unchanged from 2001 (16%) and slightly lower than in 1989 (20%). The proportion of households without a car/van was lower than in the UK\(^\text{10}\) (23%).

Nearly a third (30%) of households living in St Helier did not have a car/van. More than one in five (22%) private households in rural parishes had three or more cars/vans for private use.

Of those households without access to a car/van, two-fifths (40%) were single adults and a quarter (24%) were single pensioners.

Transport to work
Excluding those who worked from home, or lived at their place of work (2% of workers), over half (55%) of workers travelled to work by car (either alone or with other people). Over a quarter (28%) walked to work and 5% cycled. There has been no significant change in work travel patterns over the last five years.

Figure 23.3  How do you usually travel to work? (JASS 2014)

\(^\text{10}\) Source: General Lifestyle Survey 2010; Office for National Statistics
Road safety

Three-quarters (74%, excluding those who ‘don’t know’) of respondents to Jersey Annual Social Survey 2012 ‘agreed’ or ‘strongly agreed’ that more should be done to improve road safety in Jersey. When asked to identify the most frequent causes of crashes in Jersey, speeding and car drivers’ carelessness were identified by the respondents as the top two causes, followed by drink driving and drivers not reacting to road conditions.

Figure 23.4 In Jersey, when driving, what do you think causes most crashes?

Further reading: Jersey Annual Social Survey report 2012

The above perceptions of the causes of crashes can be compared with records maintained by the Transport and Technical Services department of the actual causes of car crashes in Jersey, including those that cause serious injury and those that cause slight injuries. From this data, for 2003-2011, the three most frequent causes of crashes in Jersey were drivers’ carelessness, followed by drivers not reacting to the conditions and speeding.

Road conditions

JASS 2013 found that three-fifths (59%) of residents consider the condition of the surfaces of main roads in Jersey to be ‘good’ or ‘very good’. People were more positive about the condition of the surfaces of the pavements in Jersey, with 70% rating them as ‘good’ or ‘very good’.

Further reading: Jersey Annual Social Survey reports; 2012 & 2013
24. Energy and Environment

Green House Gas emissions
Jersey is a signatory of the Kyoto Protocol and as such is committed to reducing its emissions of Green House Gases (GHG).

By switching the main electrical energy supply from an on-Island oil-fired plant to imported electricity from the European Grid, the Island’s Green House Gas emissions have reduced. However, in June 2012 the original submarine cable from France failed permanently. Jersey Electricity plc were therefore generating a proportion of its electricity on-Island using a combination of gas turbines and diesel engines until the third cable was officially ‘switched on’ in January 2015. This caused a temporary rise in Jersey’s greenhouse gas emissions, as can be observed in the increase in emissions from the industrial combustion sector.

Figure 24.1 Green house gas emissions (tonnes of CO₂ equivalents)

Source: AEA on behalf of the Department of the Environment

The Department of the Environment are working with Aether (who compile the UK’s GHG inventory) to produce online infographics that show Jersey’s historic GHG emissions in a user friendly and interactive way. This will be available later in 2015 via www.gov.je.
25. Water

**Jersey Water**

Jersey Water supplies water to approximately 38,000 homes and businesses from two water treatment works.

In 2014, Jersey Water supplied 7,080 million litres through a 580 km network of water mains. Jersey’s water resources are nearly all derived from rainfall dependent surface waters. Jersey Water collect and store raw (untreated) water in six storage reservoirs with a capacity of 2,687 million litres, which is equivalent to approximately 120 days of average demand.

In 2014, Jersey Water installed 2,800 water meters as part of its rollout of Island-wide water metering project. By the end of the project, due to be completed by mid-2015, 90% of customers will be on water meters.

Bathing water quality

Bathing water data is collected by the Department of the Environment and is independently assessed by The Centre for Research into Environment and Health, UK. The results are forwarded to The Marine Conservation Society (MCS) for inclusion in the UK Good Beach Guide.

In 2014, all sixteen beaches passed the ‘European Imperative Standard’. The 100% compliance was higher than the UK average. Thirteen out of sixteen beaches passed the stricter 'European Guide Standard' in 2014 compared with 14 passes in 2013. The decrease in Guide pass rate was probably due to more rain recorded during the 2014 bathing season, compared with the 2013 bathing season, creating more run-off from land into bathing waters.

Pollution incidents
A total of 76 water pollution incidents were reported to Environmental Protection in 2014\textsuperscript{11}. The number of reported incidents in 2014 decreased by 17\% compared to 2013 (Figure 25.2) and was 19\% below the recent long-term average (2004-2014). Environmental Protection are continuing to try and reduce this number through its pollution prevention campaigns and public engagement.

Figure 25.2 Total number of reported pollution incidents, 2001-2014

In 2014, oil incidents accounted for two-fifths (40\%) of the total reported incidents, see Figure 25.3.

Figure 25.3 Distribution of pollution incidents by type (percent), 2014

\textsuperscript{11} Pollution incidents are reported through the Department’s pollution hotline, Tel: 709535.
25. Water

Water resources
The Water Resources (Jersey) Law 2007 came into force on 1st January 2010. This Law requires that water abstractions for non-domestic purposes that exceed 15 cubic metres in any 24 hour period, from surface (streams, reservoirs etc.) or sub-surface sources (from wells and boreholes) must be licensed. Water abstractions of less than this quantity from sub-surface sources must be registered.

Table 25.3 Principal uses of water abstracted under Water Resources licences and registrations, December 2014

NB: Registration data has been reassessed since 2012 resulting in re-classification of principal water use in some cases.

The majority of registered water abstractions provide a domestic supply to a single property. The estimated total quantity of water abstracted for domestic household requirements from private sources is almost 510,000 cubic metres (about 112.1 million gallons) per year. Almost 10% of the population of Jersey obtain their household water supplies from private sources (boreholes, wells and springs), see Table 25.4.

</table>
The States of Jersey Solid Waste Strategy is based on the internationally recognised Waste Hierarchy shown below. This model shows the preferred option of prevention at the top and works downwards to the least preferred option of disposal. Waste should be managed upwards through the hierarchy to reduce waste, encourage reuse and increase recycling for materials at the end of their useful life, when reuse opportunities have been exhausted.

Transport and Technical Services (TTS) employ this model to deliver a sustainable waste management solution for the Island which comprises of a partnership between local energy recovery at the Energy from Waste plant at La Collette for burnable wastes that cannot be recycled and recycling which involves both on and off island processing. This is supported by the Recycle for Jersey programme that engages with schools, businesses and householders to promote reduce, reuse and recycle behaviours.

In addition to adhering to the Waste Hierarchy, the department’s priorities are aligned with the Waste Management (Jersey) Law 2005 and the associated waste management licences that regulate their activities, for example the licence for the Energy from Waste plant includes a list of wastes that are acceptable and non-acceptable for the plant to process. Examples of non-acceptable wastes that should not be received for energy recovery are: metals, batteries, glass and electronic goods. In order to reduce the amount of these materials present in residual waste and to increase the recycling rate of these waste streams, the department delivers specific campaigns to educate all sectors of the local community.

**Recycling**
The Island achieved a recycling rate of 30.5% in 2014, recycling a total of 30,839 tonnes of material including garden waste, paper and televisions. The target currently in place is to reach a recycling rate of at least 36% by 2018; the department is currently developing a future Solid Waste Strategy and this target may change as a result.
The tonnage of recycled waste from 2011-2014 is shown in Table 26.1. The small year on year decrease in the tonnage of recyclables collected can largely be explained by the decrease in green waste received. This is due to a reduction in the amount of green waste generated rather than a decline in participation in green waste recycling. The tonnage of green waste received in 2013 was particularly high due to damage caused by high winds and an unusual amount of snow fall in the first quarter of the year which led to trees being felled and/or cut back.

The tonnage of electrical and electronic equipment exported for recycling is lower than the previous year. This is due to only the materials that have been exported being reported in the above statistics. Due to changes in contractual arrangements and waste legislation, exports of mixed household electricals and visual display units (TVs and monitors) were delayed during the second half of 2014. The actual tonnage of electrical items received for recycling exceeds the tonnage reported above, however, as this material will be exported in 2015, the tonnage will be reported in the following year.

The tonnage of household metals collected in 2014 is also lower than the previous year and this is due to the metals that are extracted from the bottom ash generated by the Energy from Waste plant being reported separately and excluded from the recycling rate calculation. As the metals extracted from the bottom ash are not collected for recycling as a result of people proactively separating them for recycling but rather they are metals thrown away with residual waste, DEFRA guidance is this should be reported separately rather than as a recycling rate that indicates public participation in recycling.
Plasterboard is included in the recycling figures for 2014 as this material is now received separately from the public rather than mixed with non-recyclable inert waste. In previous years, plasterboard was separated by the department before being exported for specialist recycling.

1 Includes an estimated tonnage of packaging timber collected by the private sector for reuse and recycling.
2 Includes metals collected from the commercial reception at the Energy from Waste plant.
3 Includes waste lamps (light bulbs) exported for specialist recycling.
4 Received as a separate waste stream in 2014 (previously was sorted from non-recyclable inert waste).
5 Previously included as ‘household metals’ but is now reported separately following DEFRA guidance.
A decrease in the year on year tonnage of non-inert waste received by the department in 2014 was reported and this can be attributed to a decrease in the amount of bulky waste and miscellaneous deliveries into the Energy from Waste plant. However, the tonnages reported in 2013 were particularly high due to the waste generated from large demolition projects and to the processing of strategically stored waste.

The tonnage of waste received from the parish refuse collections reported an increase in 2014.

**Kerbside**
The parishes of St John, St Mary, Trinity and St Lawrence continued their household kerbside collections in 2014 by providing householders with a monthly collection for metal packaging, paper and plastic bottles, with the parishes of St Lawrence and St Mary also including cardboard recycling. The parish of St Helier also continued to expand their kerbside recycling collection which provides a fortnightly service.

All parishes except St Helier also continued to provide household glass collections. St Helier, continued to collect household glass using a bring bank system.

**Bring-banks**
By the end of 2014, the bring bank network contained 20 sites where household paper, metal packaging, plastic bottles and batteries can be collected for recycling. Cardboard recycling is also available on the larger sites to make it easier for Islanders to recycle household boxes and card packaging. The TTS department plans to continue to increase the number of bring banks, prioritising sites along main routes across the Island so that recycling can be combined with other journeys.

**Recycling Centre**
The Household Recycling Centre at Bellozanne opened in June 2007. The site continues to provide collection facilities for a wide range of materials from TVs and light bulbs to used cooking oil and cardboard.

**Green waste**
Garden waste is composted for use on agricultural land and in gardens as a ‘Soil Improver’. The TTS department also encourages households to compost their own kitchen and garden waste by providing subsidised home composting kits for sale through garden centres.
Commercial recycling
Separate recycling facilities are established for commercial deliveries of recyclable aggregates, green waste, metals and paper and card. Some recycling facilities have also been located at the Energy from Waste plant for the convenience of commercial customers.

Once the materials are collected, they are processed for recycling. The next step in each material's life cycle is shown in Table 26.2.

Waste management
A total of 45 waste incidents, on unlicensed sites (i.e. sites not carrying out a waste activity which is authorised by waste management license), were reported to Environmental Protection in 2014\textsuperscript{12}. The number of reported incidents is similar to 2013 (Figure 26.4).

In 2014, fly-tipping accounted for two-fifths of the total reported incidents (41%). The remaining incidents were categorised as: burning (33%); other (16%); unknown (4%); construction (4%); and oil (2%).

\textsuperscript{12} Waste incidents are reported through the Department’s pollution hotline, Tel: 709535
27. Climate

Meteorological data has been recorded at the Maison St Louis Observatory in St Saviour since 1st January 1894, when it was founded by Father Marc Dechevrens. Administered by the Jersey Meteorological Department, based at Jersey Airport, the long and continuous data set from the Observatory makes an important contribution to studies of climate change and the possible impact on the Channel Islands.

Records of various meteorological elements including sunshine, rainfall, wind, temperature, waves and swell are also made at a number of on-Island and offshore sites.

Data referred to within this report is measured at the following sites: temperature and rainfall at the Maison St. Louis Observatory; sunshine at the Fort Regent Signal Station; and sea temperature at St. Helier Harbour.

2014 was the warmest year on record with a mean daily air temperature of 13.3°C. The previous record warmest year was 2011 with a mean daily air temperature of 13.0°C. The highest maximum air temperature recorded during 2014 was 27.5°C on 24th July and lowest minimum was -0.2°C on 29th December.

The rainfall total for the year was 1005.6mm. 208 rainfall days were recorded, with 0.2mm of rainfall or more. The wettest day of the year was 12th October with 30.6mm of precipitation recorded.

The sunshine total for the year was 2379.0 hours, making it the second sunniest year on record. Records began at the Fort Regent Signal Station in 1925. The sunniest year on record was 2010 with 2403.2 hours of sunshine.
The mean daily sea temperature during 2014 was 13.7°C. The highest sea temperature recorded during the year was 19.1°C on 6th August and lowest was 8.6°C on 17th, 18th February and 4th March.

Published for the first time in 2013, ‘Jersey’s Better Life Index’ aims to provide a measure of the Island’s “well-being”, both from an overall perspective and also at a more detailed level.

Jersey’s overall Better Life Index of 7.5 (out of 10) ranks Jersey behind 14 of the 36 OECD countries (see Figure 28.1). In terms of overall well-being, this score places Jersey slightly below Switzerland and Belgium but above our neighbours, the United Kingdom and France.

Figure 28.1 Better Life Index for Jersey and OECD countries; 0 (low) to 10 (high)

Nordic countries rated highly in terms of overall well-being, with Denmark, Sweden and Norway all ranking in the top six OECD countries; Norway had the highest overall score.

In contrast, the lowest scores on overall well-being were recorded by the Latin-American countries of Mexico, Brazil and Chile, and in Europe by Turkey, Portugal, Hungary, Poland and Greece.

Scores and rankings for Jersey (relative to all 36 OECD countries) for each of the 11 dimensions included in the ‘Better Life Index’ are shown in Figure 28.2. Each score is on a scale of between 0 and 10, where 0 signifies the lowest possible score and 10 the highest. Jersey ranks relatively highly in several dimensions, including social connections, personal security and jobs and earnings, but ranks less well in others, including education and environmental quality, and ranks particularly poorly (lower than all OECD countries) in civic engagement (voter turnout).
Figure 28.2 Relative scores (out of 10) and rankings for Jersey in the dimensions of the Better Life Index
