

QUALITY AND PERFORMANCE REPORT

December 2021

INTRODUCTION

The Operations, Performance & Finance Committee obtains assurance that high standards of care are provided by Health and Community Services (HCS) and in particular, that adequate and appropriate governance structures are in place.

PURPOSE

The Quality and Performance Report (QPR) is the reporting tool providing assurance and evidence to the committee that care groups are meeting quality and performance across the full range of HCS services and activities. Indicators are chosen that are considered important and robust to enable monitoring against the organisation's objectives. Where performance is below standards, the committee will ensure that robust recovery plans are developed and implemented.

BACKGROUND

The Operations, Performance & Finance Committee has been established by the Health and Community Services Board and is authorised to investigate any activity within its terms of reference.

SPONSOR: Chief Nurse - Rose Naylor
Medical Director - Patrick Armstrong
Interim Chief Operating Officer - Hilary Lucas

DATA: HCS Informatics

EXECUTIVE SUMMARY

The Quality & Performance Report is designed to provide assurance in relation to Health and Community Services' performance. Indicators are chosen that are considered important and robust to enable monitoring against the organisation's objectives.

The key areas of focus remain the assurance of patient care and safety as we continue with restoration and recovery to pre-pandemic levels and the continued development of our services.

1. Planned Care:

(i) Outpatients:

Outpatient PTL	Q4 2019	Q4 2020	Q4 2021	% Change Q4 2019 to Q4 2021
Community	936	1449	2081	122%
Acute	8122	8187	7049	-13%
Total	9058	9636	9130	0.8%

There has been a reduction in the total number of patients awaiting their first appointment on the outpatient PTL over the last quarter.

When compared to pre-pandemic levels, the total number of people waiting for a first outpatient appointment is minimally higher (0.8%).

It is evident that there has been a reduction in the number of patients awaiting acute secondary services when compared to pre-pandemic levels, with the total number of patients awaiting their first appointment reducing by 13%. Analysis of referral and activity data has shown that the reduction in the acute secondary care waiting list is driven by increased activity during 2021 as opposed to a reduction in referrals.

Analysis of the community waiting list shows a significant (122%) increase in the volume of patients awaiting our community services (Dental services)

(ii) Inpatients:

Elective PTL	Q4 2019	Q4 2020	Q4 2021	% Change Q4 2019 to Q4 2021
Diagnostic WL	791	989	1378	74%
Elective WL	1958	1659	1769	-10%
Total	2749	2648	3147	14%

There has been growth in the number of patients awaiting inpatient treatment over the last quarter. This is linked to an increase in the relative number of additions to the waiting list associated with the increased outpatient activity.

Compared to pre-pandemic levels there has been an overall growth in the volume patients waiting of 14%. The elective waiting list at end 2021 is 10% lower than at the end of 2019 (pre-pandemic).

The diagnostic waiting list (endoscopy procedures) has increased by 74% between end of 2019 and end of 2021. This growth is linked to a reduction in the volume of activity during the immediate COVID response and subsequently, reduced throughput due to enhanced IPAC requirements. The rate of growth has slowed in the second half of 2021. It is anticipated that the introduction of the FIT programme and reviewing capacity by the clinical team will enable recovery to prepandemic levels within 2022.

There has been a 25% reduction in the number of under-18's on the elective waiting list in 2021.

Assurance has been provided by the Clinical Care Groups that all patients continue to be dated in order of clinical priority followed by chronological order.

2. Emergency Care

The number of patients attending the Emergency Department (ED) in December was lower than in previous months. Activity in quarter 4 was 7% less than in quarter 3. This is in line with trends seen in previous years in Jersey where we see an increase over the summer months linked to visitors to the island.

The conversion rate from ED attendance to inpatient admission was higher in quarter 4, reflecting more acutely unwell presentations attending the department over the winter months.

ED triage time, time to treatment and 10 hour stays data sets remain red, with all 3 areas deteriorating in month. The Emergency Department and Site Management services are developing options and reviewing escalation processes to identify what can be done to assist in improving performance in these fields.

It is acknowledged that data recording issues remain across the 3 Emergency Care quality indicators.

3. Maternity

The elective and emergency c-section rates have remained high throughout 2021. Through quarter 4, the length of stay on the maternity ward has remains below our standard.

Whilst there has been an improvement in the percentage of women experiencing post-partum haemorrhage, this remains in excess of the desired standard. The improvement programme is progressing and being managed through the intra-partum care group.

4. Mental Health and Social Care

Mental health services have continued to experience a high level of demand across a range of services.

Occupancy in the older peoples inpatient service remains high, with an increased number of service users who no longer need to be in hospital but have no clear discharge pathways (as a result of lack of appropriate available community provision). This is being jointly reviewed by the service and social care.

There has been one admission of a young person under the age of 18 which was clinically appropriate in the absence of any available alternative specialist bed.

Particular pressures and waiting times continue within the psychological therapies & Jersey Talking Therapies service as a result of high levels of demand, reduced staff capacity (due in part to vacancies, sickness and leave) and a backlog associated with the initial period of Covid-19. The mental health services are currently developing a recovery plan to address this.

Mental health services are also currently reviewing their Quality & Performance metrics as part of the wider service development plan.

Adult social care has seen a significant increase in the reported number of cases reopened within 90 days – this is being explored in detail by the service.

The Quality & Risk and Operations, Performance & Finance Committees continue to monitor the performance of the quality and performance metrics across HCS services via exception reporting, with the development of action plans to deliver improvement as required.

CHANGES AND TECHNICAL NOTES

HCS Informatics use the most accurate data available at the time of publication. Data may change over time as systems are updated and data quality fixes are implemented.

DEMAND AND ACTIVITY

These measures monitor demand and activity in Health & Community Services. The information is used to provide contextual information when planning services and interpreting the Quality and Performance indicators in the following sections of the report.

Measure	Dec-20	Jan-21	Feb-21	Mar-21	Apr-21	May-21	Jun-21	Jul-21	Aug-21	Sep-21	Oct-21	Nov-21	Dec-21	TREND	YTD	% Change

QUALITY AND PERFORMANCE SCORECARD

The Quality and Performance Scorecard summarises HCS performance on the key indicators, chosen because they are considered important and robust to enable monitoring against the organisation's objectives. Standards are set based on appropriate benchmarks, e.g. with other jurisdictions, or past performance in Jersey. Where performance is below standards, exception reports are provided. For some indicators, a standard is not considered applicable. Where a standard is currently reported as "TBC" this is because it is currently under review to ensure that all standards are realistic for Jersey.

EXCEPTION REPORTS

WOMEN, CHILDREN AND FAMILY CARE

INDICATOR	13-MONTH GRAPH	COMMENTARY & ACTION PLAN	TRIGGER & OWNER
<p>% deliveries by C-section (Planned & Unscheduled)</p>		<p>The combined (elective and emergency) c-section rate for December was 40%. The average section rate for 2021 was 36%. A review of c-sections in month has indicated that a large proportion of women (67%) who had not had a baby before (primigravida) and were induced, resulted in emergency c-sections. A deep dive is underway to understand the factors contributing to this increase. In addition, 9 women delivered in December who had had a previous section. Of these, 8 (89%) resulted in a repeat section. There is a VBAC clinic in place to counsel women, and further review is underway into ways to reduce repeat c-sections.</p>	<p>>26%</p> <p>WACS Care Group General Manager</p>
<p>% primary postpartum haemorrhage >= 1500</p>		<p>The PPH rate for December was 6%. The average PPH rate for 2021 was 7.7%. A risk assessment tool is being trialled, which includes the use of Syntometrine as opposed to Oxytocin alone, if women are deemed to be more at risk of PPH. An increased PPH rate is a recognised side effect of a change in pharmacology which is being seen throughout the UK.</p>	<p>>2.9%</p> <p>WACS Care Group General Manager</p>
<p>% of women that have an induced labour</p>		<p>The percentage of women having an induced labour in December was 29%. The average for 2021 was 27% A Labour Ward Forum is being established and will commence in February 2022. This will focus on induction of labour in order for us to achieve the desired 25% cap.</p>	<p>>25%</p> <p>WACS Care Group General Manager</p>
<p>Was Not Brought Rate</p>		<p>The WNB rate in December was 14%. This was higher than desirable. It was managed in line with the WNB policy with appropriate follow up.</p>	<p>>9.8%</p> <p>WACS Care Group General Manager</p>

WAITING LISTS/PATIENT TRACKING LIST (PTL)			
INDICATOR	13-MONTH GRAPH	COMMENTARY & ACTION PLAN	TRIGGER & OWNER
% patients waiting >90 days for 1st appointment		Analysis demonstrates that 84% of patients awaiting community dental and orthodontic services and 35% of patients awaiting acute services are waiting over 90 days. Challenges within community dental services are being addressed through a Task and Finish programme which includes measures to increase capacity but also manage demand appropriately. Assurance has been provided through the Care Groups that patients are dated in order of clinical priority.	<p>>35%</p> <p>Care Group General Managers</p>
% of patients waiting > 90 days for elective admissions		Challenges continue within elective services, in particular Trauma & Orthopaedics, Ophthalmology and General Surgery. This is linked to reduced activity in Quarter 4 due to the impact of the latest wave of COVID on theatre capacity and staffing. Assurance has been provided by the Care Groups that patients are booked in order of clinical priority.	<p>>35%</p> <p>Care Group General Managers</p>
ELECTIVE (SCHEDULED) CARE			
INDICATOR	13-MONTH GRAPH	COMMENTARY & ACTION PLAN	TRIGGER & OWNER
Outpatient Did not attend (DNA) Rate		DNA rates for clinics are being reviewed and targeted as required through the Care Groups. The elective access policy is being finalised, including HCS' DNA Policy, for ratification prior to launch in 2022.	<p>>8%</p> <p>Care Group General Managers</p>
New to follow-up ratio		New to follow up ratios are being analysed across HCS and benchmarked to identify opportunities from best practice.	<p>> 2.0</p> <p>Care Group General Managers</p>
Intra-session theatre utilisation rate		Reduced activity due to staffing and inpatient constraints. There are data quality issues in this metric as it does not currently include day surgery and minor ops activity.	<p><85%</p> <p>Surgical Services Care Group General Manager</p>

EMERGENCY (UNSCHEDULED) CARE																															
INDICATOR	13-MONTH GRAPH	COMMENTARY & ACTION PLAN	TRIGGER & OWNER
