

# Jersey Retail Sales Q4 2012

Statistics Unit: [www.gov.je/statistics](http://www.gov.je/statistics)

## Summary

### On an annual basis:

- the seasonally adjusted total volume of retail sales in Jersey in Q4 2012 was 1% lower than in the corresponding quarter of 2011;
- the predominantly **food** sector recorded its first increase in volume on an annual basis for six quarters;
- the predominantly **non-food** sector has now recorded six consecutive quarters of declining volume on an annual basis;

### On a quarterly basis:

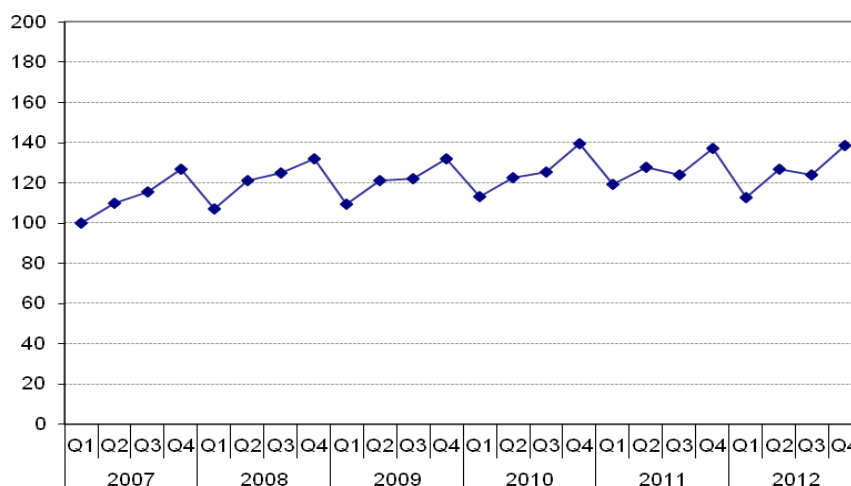

- the seasonally adjusted **total volume** of retail sales in Q4 2012 was at the same level as in the previous quarter (Q3 2012);
- compared with the previous quarter:
  - the predominantly **food** sector saw the volume of retail sales increase by 1%;
  - the predominantly **non-food** sector saw the volume of retail sales fall by 1%.

## All retailers

### Value of retail sales, all retailers

Figure 1 shows the total value of retail sales for the period from 2007 to 2012. The clear seasonality is apparent, with retail turnover tending to be largest in the fourth quarter of each calendar year.

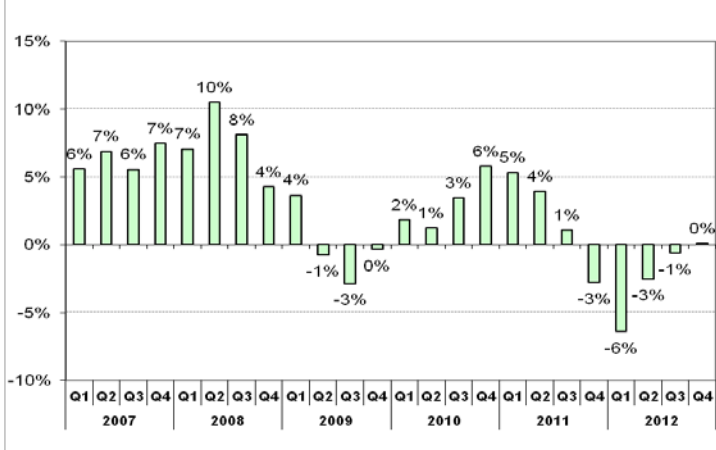

**Figure 1 – Total value** (Q1 2007 = 100); *non-seasonally adjusted*

Comparing the same quarter in a given year with that of a year earlier (Figure 2) shows that each quarter from early 2010 to Q3 2011 had seen an increase in the total value of retail sales on an annual basis<sup>1</sup>. In contrast, the subsequent four quarters (Q4 2011 to Q3 2012) each recorded a fall in total value on an annual basis.

The latest quarter (Q4 2012) saw essentially no change in the total value of retail sales on an annual basis.

**Figure 2 – Total Value: annual percentage change<sup>2</sup>; *seasonally adjusted***

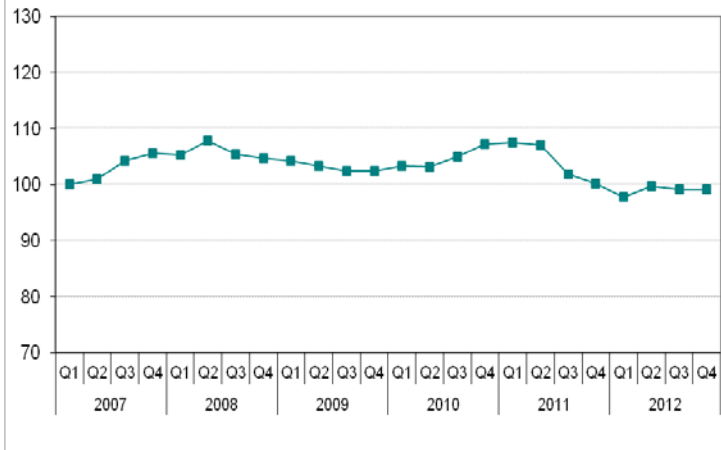

On a quarterly basis, the seasonally adjusted total value in Q4 2012 was almost 1% higher than in Q3 2012 (see Annex Table A1).

The total value of retail sales in Jersey in calendar year 2012 (excluding the motor trades - see Notes) was approximately £720 million.

**Volume of retail sales, all retailers**

The volume index series<sup>3</sup> is derived from the value series by use of deflators<sup>4</sup> which remove the effect of price changes. The seasonally adjusted total volume index, from which seasonal and calendar effects are also removed, is shown in Figure 3a.

**Figure 3a – Total Volume; (Q1 2007 = 100); *seasonally adjusted***

<sup>1</sup> The increase in the rate of the Good and Services Tax (GST) from 3% to 5% in June 2011 was a contributing factor to the annual changes in value recorded in each of the four quarters from Q3 2011 to Q2 2012.

<sup>2</sup> Annual percentage changes shown as labels in figures are rounded to the nearest integer.

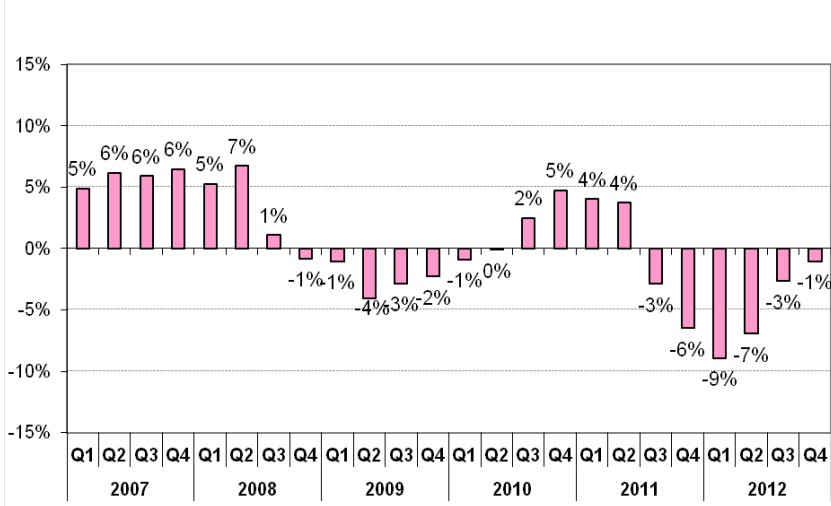

<sup>3</sup> A volume index is an average of the proportionate changes in the quantities of a specified set of goods between two periods of time.

<sup>4</sup> The deflators used are a weighted combination of the relevant section level indices of the Retail Prices Index (RPI). Following the recent methodological changes incorporated in the Retail Sales publication produced by the UK Office for National Statistics, the price deflators applied are harmonic means of the corresponding RPI section indices.

After a notable decline recorded between Q2 and Q3 2011, the seasonally adjusted total volume of retail sales has remained substantially flat on a quarterly basis for the last five quarters (see Figure 3a). The total volume of retail sales in the latest quarter (Q4 2012) was at the same level as in the previous quarter (Q3 2012).

On an annual basis, each of the last six quarters have recorded falls in total volume compared with the corresponding quarters of the previous year (Figure 3b); the most recent quarter, Q4 2012, recorded a decline in total volume of 1% compared with Q4 2011.

**Figure 3b – Total Volume: annual percentage change; *seasonally adjusted***

### Sector summaries

The “Predominantly food” sector is comprised of supermarkets, convenience stores and other small food stores.

The “Predominantly non-food” sector is comprised of three sub-categories: Household goods; Textiles, clothing and footwear; and Non-food specialised stores.

The survey returns within each sub-category are analysed separately and then aggregated to produce value and volume estimates for each sector.

### Value of retail sales (seasonally adjusted)

The total value of retail sales in predominantly **food** stores was essentially flat on an annual basis in late 2011 and early 2012. In contrast, the latest quarter, Q4 2012, recorded a 3% increase compared with Q4 2011 (see Figure 4a).

After seeing some growth on an annual basis in late 2010 and early 2011, the predominantly **non-food** sector has recorded a decline in total value on an annual basis for each of the last six quarters (see Figure 4b).

**Figure 4 – Value of retail sales in predominantly food and non-food stores; annual percentage change; seasonally adjusted**

Figure 4a - Predominantly food: Annual % change in Value (s.a.)

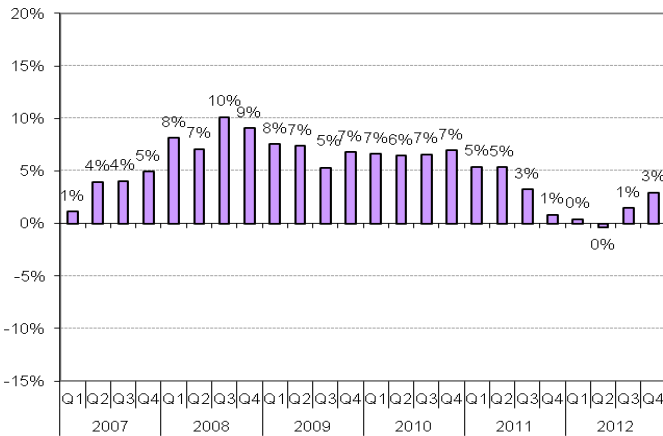

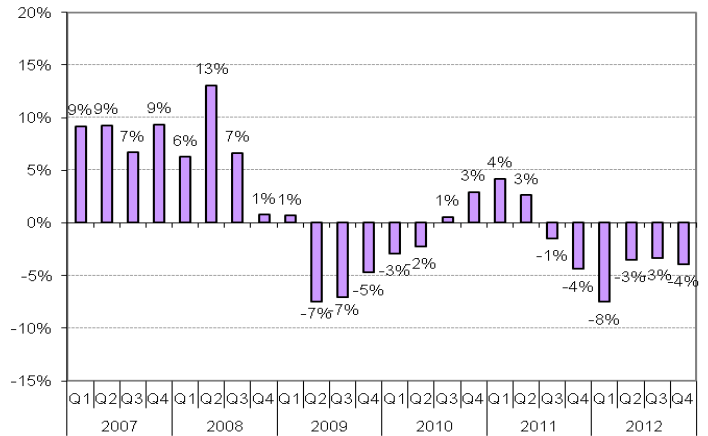

Figure 4b - Predominantly non-food: Annual % change in Value (s.a.)

s.a. = seasonally adjusted

**Volume of retail sales (seasonally adjusted)**

On a quarterly basis, the total volume of retail sales in predominantly **food** stores has seen small increases for each of the last three quarters (Figure 5a).

On an annual basis, the total volume of retail sales in predominantly **food** stores declined in each quarter from Q2 2011 to Q3 2012. In contrast, the latest quarter, Q4 2012, recorded an increase in volume of 1% compared with the corresponding quarter of 2011 (see Figure 6a and Appendix Table A1).

**Figure 5 – Volume indices of retail sales in predominantly food and non-food stores; seasonally adjusted**

Figure 5a - Predominantly food: Volume (s.a.; Q1 2007 = 100)

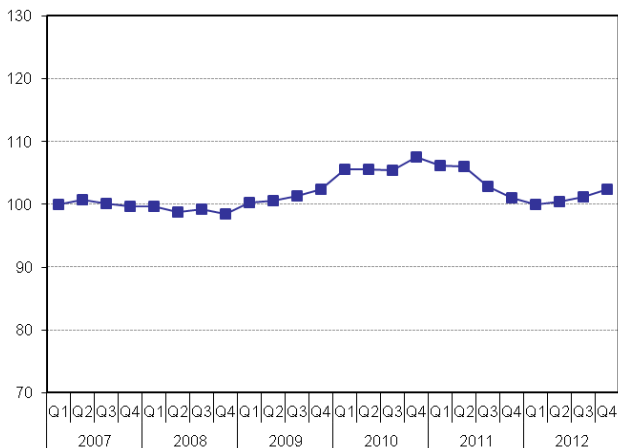

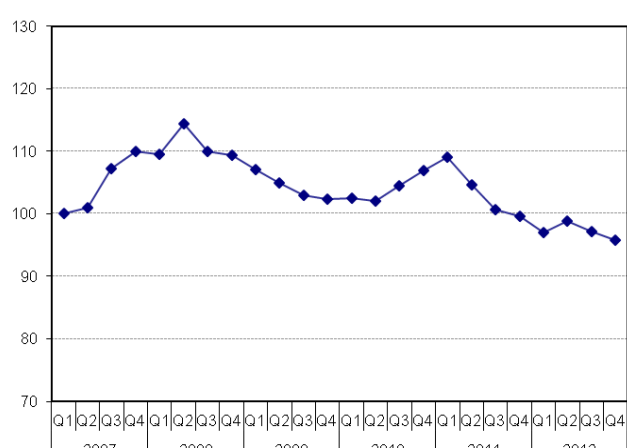

Figure 5b - Predominantly non-food: Volume (s.a.; Q1 2007 = 100)

Having seen some growth in 2010, the total volume of retail sales in predominantly **non-food** stores has since decreased, on both a quarterly (Figure 5b) and an annual basis (Figure 6b).

The total volume of retail sales in predominantly **non-food** stores in the latest quarter (Q4 2012) was 1% lower than in the previous quarter (Q3 2012) and some 4% lower than in the corresponding quarter of 2011.

**Figure 6 – Volume of retail sales in predominantly food and non-food stores; annual percentage change; *seasonally adjusted***

(r) revised: some estimates for Q3 2012 shown in Table A1 have been revised compared with the previous publication due to the provision of more recent manpower data;

## Notes

1. Overview: Sampled businesses for Jersey Retail Sales Survey report total **retail turnover** on a quarterly basis. The main results of the survey are **total value** and **total volume** estimates in **seasonally adjusted** form:

- **value** estimates reflect the total turnover that businesses have recorded in a given quarter.
- **volume** estimates adjust the value estimates to remove the effect of price changes.

2. Retail: "Retail" is defined as the sales of goods to the general public for personal or household consumption, excluding motor trades.

3. Sample: A representative sample of retail businesses are sampled each quarter, stratified by size. The sample is reviewed twice yearly so that new or expanding businesses can be introduced; in this way, the sample remains representative of the retail trade sub-sector in Jersey.

4. Response rate: the response of businesses to the survey in Q4 2012 was 85% and represented coverage, in terms of employment, of half (50%) of Jersey's retail sub-sector.

5. Turnover: is defined as the net value of sales for all outlets under the business name within Jersey. Turnover includes all discounted, credit and deferred payments allowed to customers but not allowances for goods taken in part-exchange.

Total turnover includes:

- Turnover from services (e.g. repairs) as well as those from sales
- All charges for credit given as well as cash prices of credit sales
- Retail sales from outlets to all customers off-Island
- Retail sales via the internet
- Sales of mobile phones but excluding rental and mobile phone cards
- Sales against gift tokens, when token is redeemed not the face value of tokens sold
- Sales against money-off promotion coupons.

Total turnover excludes:

- Sales or commission on lottery tickets
- Receipts from credit card sales not made in the specified quarter
- Any health exemption receipts
- Sales of motor vehicles, parts, accessories and petrol
- Sales from catering facilities to customers
- Sales from other businesses trading on premises and any commission received on such sales
- Any non retail activity (e.g. manufacturing).

6. Classification:

**a) Predominantly Food** – Supermarkets, convenience stores and other stores which sell mainly food, beverages or tobacco;

**b) Household goods** – furniture, electrical appliances, DIY, gardening tools, floor covering, lighting equipment, haberdashery, crockery

**c) Textile, Clothing and Footwear** – clothes, shoes, accessories

**d) Non-Food Specialised goods** – e.g. sports goods, jewellery, craft goods, photographic, music, books, newspapers, office supplies, children's toys, second-hand goods, chemists, health goods, flowers, seeds, fertilizer, pets, medical goods, audio visual/home computing equipment, mobile phones, optical and precision equipment.

7. Methodology:

- Retail turnover for each sub-sector is calculated from the respondent businesses. A ratio estimator approach is applied to estimate the total retail turnover separately for each sub-sector, using the appropriate full-time equivalent (FTE) employment data compiled by the Jersey Manpower Survey;
- Volume data for each sub-sector are derived from value data using price deflators which are base-weighted harmonic means of the corresponding section level indices of the Retail Prices Index;
- Seasonal adjustment is conducted using the Eurostat Demetra software package.
- The revision of seasonally adjusted series is based on that of the UK Office of National Statistics revision policy for the Retail Sales Index.
