Managing Director, Jersey General Hospital
3rd Floor, West Wing, Peter Crill House, Gloucester Street
St Helier, Jersey, JE1 3QS
Tel: +44 (0)1534 442280

2015

HSSD Clinical Directors meet every other week with the Jersey General Hospital Medical Director, Managing Director and Operations Director. Through 2014 and 2015 Clinical Directors have received briefings on the progress of the Future Hospital Project each month. This comprehensive clinical engagement has been invaluable in providing advice and guidance on the developing Acute Services Strategy and in particular the New Clinical Model described by the Strategy.

As the Site Options Appraisal Project (CR004) has progressed Clinical Directors were therefore in a strong and informed position to advise on how clinical adjacencies and patient flows within the respective Site Options might be improved to best support the safety, sustainability and affordability of services that would be provided on each site. They had a clear appreciation of how each might best work for the benefit of patients, staff and the Islands health and social care more generally.

The participation of the General Hospital Operations Director on the Site Options Risk and Benefits Workshop lead by Gleeds Management Services (26 March 2015) also provided an important means of assuring Clinical Directors that their views with respect to the risks and benefits associated with each site were given due consideration in the formal appraisal process.

In recent Meetings (March/April 2015) the site plans and 'stacking diagrams' have been shared with Clinical Directors and they have been able to observe how their feedback has been incorporated into the evolving design of each of the Options.

An important conclusion of the Clinical Directors is the necessity to implement as much of the New Clinical Model before the opening of the new building. This work would need to be progressed irrespective of the development of a new hospital if the health challenges on the Island are to be met

Yours sincerely
