

Clear investment. Pure energy.

## BEFORE YOU START CONSTRUCTION WORK

# 1. STOP 2. THINK 3. CALL

These three steps could  
help to save your  
life and prevent  
serious injury

**!**  
**Call  
today  
505460**

Before you start demolition or refurbishment work, stop and think about the dangers of electricity. Guidance is provided in the Health & Safety Inspectorate's yellow booklet: "Working safely and avoiding danger from underground services and other utility apparatus."

### **Do not risk your safety!**

Call Jersey Electricity first and we will identify, free of charge, where the electricity mains supply cables are located, where you are working. Plan early - disconnection can take up to 30 working days.

# CONSTRUCTION WORK CAN BE DANGEROUS IF APPROPRIATE CONTROLS ARE NOT IN PLACE BEFORE WORK STARTS

Our engineers sleeve overhead lines for your protection

## OVERHEAD LINES

**BEFORE** erecting scaffolding or putting up a ladder to work within three metres of an overhead power line you **MUST** contact Jersey Electricity to arrange for us to check the installation.

If necessary, we will apply additional protection, plus give you free safety advice and guidance before you start work.

This applies to **ALL** overhead mains cables, whether they are supplying or running alongside your construction site.

## UNDERGROUND CABLES

**BEFORE** you carry out any building demolition or excavations **ALWAYS** contact Jersey Electricity first to obtain records of any underground service or mains cables.

We are happy to provide **FREE**, further advice on how to work safely within the vicinity of any live cables.
